nection Connected to Redmi (name of phone). Disable Wireless Local Area Network (Fig. 5).

3. Connect the phone to Wi-Fi; it also works with cellular data. Turn on

Bluetooth tethering on phone.

4. On the laptop, go to Control Panel→Devices and Printers→Bluetooth Devices. You will see your mobile device. Right-click on it and connect using Access Point (Fig. 6).

5. After a few seconds, the laptop will show an Internet connection via Bluetooth.

In this case, Internet speed will be limited because of the limitations of Bluetooth technology. This technique is useful when you do not want to give Wi-Fi password to anyone.

Battery consumption is lower when using Bluetooth tethering as compared to using a Wi-Fi hotspot. The only disadvantage of this technique is that only one person can connect at a time.

This was tested on Windows 7-based laptop and Redmi 4 Android phone. **EFY**
