

The Changing TEST AND MEASUREMENT Market Of India

5G and vehicle electrification are the major technology trends that will reshape the industry. Customer centricity and continuous innovation will be high on radar of T&M companies

Accurate testing and measurement (T&M) is crucial for any technology product design and manufacturing process to ensure product quality. T&M systems play a critical role in ratifying the performance of a wide range of technology products. Moreover, increased product complexity has spurred a growing demand for precision testing at every stage of the product life cycle, starting from product design and development phase, to production testing, pre- and post-market testing, as well as support. Thus, growth of the T&M industry goes hand in hand with the growth of technological development, expanding end-user applications and growing need to validate the performance of equipment.

Other factors driving growth in the T&M domain are stringent quality, safety and environmental standards for manufacturing, maintenance and use of equipment. Moreover, proper implementation of government initiatives like Make in India, Smart Cities, Digital India and the defence manufacturing

push have also opened new opportunities for T&M industry players in the country.

Opportunities galore

Globally, the T&M equipment market is growing. Enhanced adoption of electronic devices and increased penetration of modular instrumentation are some of the major factors driving this market. According to a report by Market Research Future (MRFR), valuation of the worldwide test and measurement equipment market is expected to touch USD 28 billion by 2023 (Fig. 1).

Frost & Sullivan, a market research firm, forecasts that the Indian market for general-purpose electronic T&M instruments alone will touch US\$ 300 million by 2022 (Fig. 2). Growth of the T&M market is a result of the growth registered by key end-user segments like telecom, automotive, aerospace and defence, electronics design and so on. Defence and other government sectors as well as education sectors have also been instrumental in driving the growth of the T&M market in India. Their key demand-driving application sectors are wireless communication, automotive and industrial.

T&M equipment plays a critical role for the telecom sector ecosystem partners including network equipment manufacturers, mobile device manufacturers and telecommunication service providers. A major driving factor for the growth of the telecom test equipment market is the introduction of new technologies and standards within the telecom industry. Demand for test equipment is enhancing due to growing bandwidth demands and introduction of next-generation cellular and wireless
