

MyHDL

Visit: www.myhdl.org

Full version: Free

This open source platform enables programmers to use Python for the purpose of electronics hardware designs (like ASICs and FPGAs). This hardware definition language can be used to generate VHDL and Verilog codes from a MyHDL design, create a testbench, convert output verification and perform co-simulation with Verilog. MyHDL provides a data system independent of traditional data types.

HANDY APPS To Help Organise Your Day

Evernote

Updated: January 2019

Platforms: Android and iOS

Download: Full version (free)

Evernote is a popular app to help users organise their to-do lists and store important notes. It comes with a variety of features. Users can write information in the form of singular searchable notes, memos, checklists or complete notebooks. The tool can also capture important images or scan documents. Essential information can be stored in the form of texts, sketches, photos, audios, videos, PDFs or Web clippings. Users can organise invoices and bills for quick reference. Evernote can be synced to the cloud, allowing users to access their accounts from anywhere with any device. It can even be used to share documents with other users.

Platforms: Android and iOS

Download: Full version (free)

On busy days, people can use Todoist to ensure they get all their jobs done as per sequence of priority. They can use the app to complete their daily chores or important project tasks, by adding notes and schedules in Todoist calen-

Android

dar. High-priority tasks can be marked in red. Projects can also be shared, and users can distribute tasks among colleagues. Todoist provides a graphical view of task completion status and trends to help users improve their execution strategies.

iOS

RoboForm Password Manager

Updated: November 2018

Platform: Android

Download: Full version (free)

RoboForm app helps users remember their passwords and credentials without actually remembering them. It allows auto-entry of passwords in apps and websites. It also helps auto-filling of Web registration forms and generate new passwords. The application can be run on its own browser or be synced with Google Chrome. App security is well-established, ensuring sensitive data remains protected at all times. Users can stop using RoboForm as required.

Android

using Weebly. The app provides an intuitive and interactive user interface with drag-and-drop useability, making website structuring simple and quick. Users can also monitor site activities and get details on site traffic, orders, form entries and other essential business information. Websites created on Weebly can also accommodate blog posts.
