

Dosing system

Vectomix dosing system is used to handle multi-component materials. It can process the materials either by shot dispensing or by continuous flow. It can be connected using a mixing block onto the outlet of which a disposable plastic mixer is mounted. Use of a hose package with a decentralised mixing system is also possible. This modern metering system can be used in any industry where materials have to be applied in a high precision and repeatable way, including industries like automotive, electrical and electronic, renewable energy, white goods and many more.

Cut-off wheel

Taparia Tools has launched cut-off wheels for fast-cutting applications. The wheels are made by bonding together aluminium oxide, and can be used in various metal- and stainless-steel-cutting applications. These are double-netted for ensuring high safety of the operator. Size of the wheels used must be as per the size of the power tool. The wheels are available in 105mm and 355 mm diameters, with a thickness of 1.0mm and 2.5mm, respectively.

Wireless charging solution

ROHM has announced the development of an automotive wireless charging solution with integrated NFC communication. This solution combines ROHM's automotive-grade (AEC-Q100 qualified)

wireless power transmission control IC (BD57121MUF-M) with STMicroelectronics' NFC Reader IC (ST25R3914) and 8-bit MCU (STM8A series). In addition to being compliant to WPC's Qi standard supporting EPP (extend power profile) that enables the charger to supply up to 15W of power, the multi-coil design enables a wide charging area that provides some spatial freedom in vehicle applications (2.7 times greater charging range versus single-coil configurations). This means that consumers do not need to worry much about exactly aligning their smartphones to the provided charging area to be able to charge wirelessly.
