COMPONENTS

MOSFETs

ROHM has announced a new lineup of its PrestoMOS series—R60xxJNx series—of 600V super junction MOSFETs that include 30 new models. This series increases design flexibility while maintaining the industry's fastest reverse recovery time (t_{rr}) optimised for electric vehicle (EV) charging stations and motor drives in home appliances such as refrigerators and air-conditioners.

Compact display

Featuring external dimensions of 40mm x 20mm, EA DIPS082 fits into 48.3cm (19-inch) rack systems with one height unit. The compact EA DIPS082 dot-matrix panel including pins with a grid of 2.54mm is soldered directly on the circuit board or plugged into a socket. No additional fixing screws, spacer sleeves or connecting cables are required. This saves material and shortens production time per module by two to three minutes.

Transistor

Optimised for good conduction and switching performance in soft-switching circuits, STMicroelectronics' STGWA40IH65DF and STGWA50IH65DF

650V STPOWER IGBTs increase the energy efficiency of resonant converters in the 16kHz-60kHz switching-frequency range. These are fine-tuned for half-bridge circuits of such appliances as induction cookers and other soft-switching applications. Rated for 40A and 50A respectively, STGWA40IH65DF and STGWA50IH65DF serve applications up to 4kW.

DC/DC converter

RECOM's recent addition to its medical portfolio is REM2 series, which offers versatile features and complete medical certifications. These modular DC/DC converters provide engineers with more freedom to develop their PCB layout, knowing that they will comply with the stringent regulations for medical certifications.

Current sensor IC

Allegro MicroSystems offers a new family of automotive AEC-Q100-qualified, monolithic Hall effect current sensor ICs. Small and energy-efficient, the ACS71240

family is ideal for EV chargers, DC/DC converters, as well as industrial motor and Internet of Things (IoT) applications. The new devices offer next-generation improvements including output signal immunity to stray magnetic fields, improved output signal accuracy ($< \pm 1.5\%$ typical) and output signal immunity to noisy supply voltage rails.

TMR sensor

Mouser Electronics is now stocking TLE5501 XENSIV magnetic sensors from Infineon Technologies. Infineon's first magnetic sensors based on tunnel magnetoresistance (TMR) technology, the TLE5501 sensors are ideal for automotive brushless DC (BLDC) motor commutation in such devices as wipers, pumps and actuators, as well as for steering angle sensing and integration in electric motors.

Power management IC

With automotive camera modules becoming increasingly smaller, designers can now utilise the ultra-compact MAX20049 power management IC from Maxim Integrated Products, which integrates four power supplies into a tiny footprint. In addition to being the most compact power management IC for vehicle camera modules, it delivers the highest efficiency on the market today. MAX20049 offers many options to support various output voltages, while also providing fault mitigation by flagging faults and shifts in output voltages.
