

IGBT module platform

Infineon Technologies extends its portfolio of high-voltage devices with a new package, XHP 3. It is a flexible IGBT module platform for high-power applications in the voltage range from 3.3kV up to 6.5kV. The module allows for scalable designs with reliability and highest power density. Due to its symmetrical design with low stray inductance, it offers significantly improved switching behaviour. For this reason, XHP 3 platform offers a solution for demanding applications such as traction and commercial, construction and agricultural vehicles as well as medium-voltage drives.

TEST & MEASUREMENT

Videoscope

FLIR VS70 is a rugged, waterproof and shock-resistant videoscope with a large, 14.5cm (5.7-inch) colour LCD display. It features intuitive hand-set controls that enable users to manoeuvre the narrow camera probe into tight spaces to deliver vivid and sharp video and images. Advanced inspection solutions, expansion cameras and add-on accessories enable them to expand FLIR VS70 to address many different inspection needs.

SPI inspection system

Viscom has launched S3088 DT full 3D AOI system that has been specifically developed for high-volume dual-track operation. It is optimally configured for economic efficiency, speed and technical performance while offering the highest degree of flexibility to users. Based on Viscom XM sensor technology, S3088 DT can also be configured for CCI, SPI and UFI applications. The system adjusts to varying track widths and can be efficiently utilised in single-track

mode, which features the added value of inspection of large PCB boards with sizes up to 450mm x 655mm.

Optical spectrum analyser

Anritsu has launched a new spectrum analyser, MS9740B, developed for evaluating the output characteristics of optical active devices used by optical communication systems. MS9740B

keeps the same measurement-sensitivity performance, functions and size as its predecessor MS9740A while shortening measurement processing times by 50 per cent, further improving production-line efficiency by optimising MS9740B's optical receiver bandwidth settings. This performance upgrade slashes optical active device inspection times and increases mass-production-line efficiency.

Spectrum analyser

Rohde & Schwarz is launching two new signal and spectrum analyser families, with different frequency models covering up to 44GHz. The R&S FSV3000 is designed to help users set up complex measurements in the simplest and fastest way possible.

With its easy usability and high measurement speed, it is the right instrument for labs and production lines. It provides up to 200MHz analysis bandwidth—enough to capture and analyse, for example, two 5G NR carriers at once.
