

IP camera

Supports night vision and two-way audio with inbuilt microphone and speaker

Astrum has introduced smart HD IP100 camera, which offers simpler and smarter security for home and office. The IP100 camera features 720p HD picture quality with wide dynamic range. The 355-degree pan and 90-degree tilt feature enables adjusting of angle and rotation as per the area to be covered, leaving no uncovered spots. The inbuilt rotating motor allows rotation of the camera through a mobile app, whereas the inbuilt IR lens provides night vision for

complete security. The wireless HD IP100 Wi-Fi CCTV also comes with a motion detection that will send users alarm alerts on the mobile app when motion is detected.

The camera's two-way audio support lets users connect with the other side of camera with the help of an inbuilt microphone and speaker. The camera allows them to record videos that support 64GB TF capacity. Users can remotely access and playback stored data anytime, anywhere.

Smartphone

Combining advanced design and innovative features

Voto Mobiles has launched a new smartphone, V9, which has a non-slip design. V9 runs on Android Oreo 8.1, and is powered by a quad-core processor and 3GB + 32GB memory. Featuring a fingerprint sensor and face ID unlock, Google-certified device (bug-less software) V9 has 13MP + 2MP rear and 8MP front cameras with panorama view mode.

Sporting a 2.5 curve HD display, V9 comes with a 3000mAH battery, better connectivity with dual 4G (VoLTE and VoLTE), faster multitasking, bigger storage, rich graphics experience and app usage in an uninterrupted form. Besides a powerful sensor and stunning resolution, the high-quality HD display screen gives a spectacular quality view.

Wi-Fi router

Ideal for fibre-to-the-home solution

DIGISOL Systems has launched DIGISOL DG-GR4342L, a 300Mbps Wi-Fi router designed for FTTH ultra-broadband access and triple play service for home and small-office-home-office (SOHO) users. It is based on GPON and Gigabit EPON technology. The device is fully compliant with IEEE 802.3ah EPON standards.

The router is ideal for fibre-to-the-home solution, as it allows users to access high-speed Internet via GPON port and devices to connect wirelessly at 300Mbps wireless 802.11n speeds. Compliant with ITU-T G.984 GPON standards, DG-GR4342L supports maximum data rates of up to 2.5Gbps downstream and 1.25Gbps upstream.

DGGR4342L features a dual-mode optical network unit (ONU), thus works on both GPON and Gigabit EPON technology, which can detect and exchange PON mode automatically. The device supports advanced dynamic bandwidth allocation, which helps in bandwidth and traffic management of ONU. WAN supports bridge/router mode for mixed applications and 300Mbps Wi-Fi with multiple SSID. The device also supports dual-stack (IPv4 and IPv6) to ensure compatibility with the next generation of the Internet and enables a range of new services and improved user experience. It supports NAT/firewall and layer 3 routing functions as well.
