

GADGETS OF TOMORROW REVEALED AT CES 2019

Paromik Chakraborty

We love how technology has made our daily lives more interesting. Starting from wireless speakers to smart footwear, we are surrounded by innovative gadgets that can come handy in various practical situations. We get a glimpse of such latest gizmos every year at the Consumer Electronics Show (CES), and this year was no different. Gadgets for daily use, fitness and healthcare, entertainment and all other areas of application were presented. We describe here briefly some of the most interesting and innovative gadgets that were exhibited at CES 2019.

A tray to charge all devices. We mostly use wireless or battery-driven devices that need to be recharged, like smartphones, tablets, earphones or smartwatches. Sure, you can just plug in a charger for each device to charge or make the device wait its turn if you have a dearth of chargers. But for Apple device owners, Gaze Tray can wirelessly charge

A tray to charge all devices

all devices together, simply by placing them on the tray.

The tray comes with a three-coil wireless charging facility for Qi-compatible phones and devices, two one-coil wireless chargers for Apple Watch or AirPods, and two USB ports, either of which can be used to draw power from a wall socket or charge another device. LED indicators tell if the devices are placed properly on the tray for charging. It starts at US\$ 49.

Glucometer that connects to the

phone. Diabetes, a disease commonly found in people, needs constant monitoring to keep any major health risks at bay. Handheld diabetic testers so far have served an important purpose of staying aware at home. To take this service a notch higher, we can look at iHealth Align glucometer—a key-shaped accessory that can be fitted with the smartphone via the 3.5mm headphone port.

The user can attach an iHealth test strip (to be bought separately) on the
