There are several ways manufacturers can mitigate cybersecurity risk in connected devices. These are:

- Use of certified products that are correctly configured
- Certification of information security management systems
- Threat risk assessments vulnerability assessments and penetration testing

A reliable, high-performance elec-

tric power steering is made possible by aligned solutions featuring sensors and low-loss MOSFETs. It enables advanced driver assistance systems such as side-wind compensation, lane assist/keeping and parking assistance systems. It improves fuel efficiency, car handling, overall driving experience and comfort. It can be adapted via software to suit diverse car models as well as dedicated driving modes.

Praveen adds, "Sensors must be carefully selected, as the wrong choice can make the problem a lot worse. Processing power used to comprehend and react based on the data collected from sensors must be powerful enough to give control signals in real time. Any delay in reaction to the scene can prove fatal. Software and logic used to get sensor data and control the vehicle must be efficient. Communication is an important factor as any loss of communication between any pair of devices can lead to critical failure."

To sum up

Research and development is going on all across the world to produce safe and reliable autonomous vehicles. These vehicles depend on a number of external factors such as roads, traffic and weather of the location, among others. There is a need for data analysis and testing to have the most suitable and safe design. Sensors and systems should be designed such that these do not interfere with other integrated components in autonomous vehicles. **EFY**

One company. Many solutions.

PREMIUM 3D PRINTER FILAMENTS

Small spool sizes so you can experiment with more colors without spending a bundle!

- 0.25kg spools
- 0.50kg spools

ENCAPSULATING AND POTTING EPOXIES

SILVER CONDUCTIVE EPOXY

Cold Solder Repair

Cat. No. 8331

Now available in 40 gram kits!

PENETRATING OIL

Cat. No. 8472

TOTAL GROUND

Carbon Conductive Coating

Cat. No. 838

Create your own static-free work station

ACRYLIC CONFORMAL COATING

IPC-CC-830B

Cat. No. 419C

Flux Removers

Contact Cleaners

Circuitboard Protection

Coatings

EMI/RFI Shielding

No Clean Flux
