lation cuts in China, and a module oversupply situation.”

“The market is upbeat, and solar equities rebounded strongly in the first quarter. However, China is still a wild card, and depending on its 2019 policy direction, it could have a significant impact on the solar industry,” he added.

## Hyundai to make electric car components in India

Hyundai Motors, which has already announced it plans to bring electric vehicle (EV) offerings to the Indian market, will be manufacturing some parts of these EVs within the country, according to *India Times*. The South Korean car maker is in talks with its strategic partners to invest in the production of components for EVs in India, the report quoted Seon Seob Kim, managing director, Hyundai Motor India Ltd.

The company aims to launch its first EV product in the country in 2019. Kim says that the car will be brought in a complete knock-down (CKD) form and will then be assembled in Hyundai's Chennai plant.

In addition, Hyundai is looking to introduce its hybrid vehicles in the country. Kim believes that with the ongoing transition from internal combustion (IC) engines, hybrids will soon have ample demand in the country. Moreover, the central government's recently introduced FAME-II will also boost the demand. The scheme offers support for 10,000 units of hybrid vehicles over the next three years.

## Apple starts manufacturing iPhone 7 in India

Giving an impetus to its India manufacturing plans, Apple has started the assembling of iPhone 7 at its supplier Wistron's facility in Bengaluru. Taiwanese industrial major Wistron already assembles iPhone 6S in the country.

“We are proud to be producing iPhone 7 in Bengaluru for our local customers, furthering our long-term commitment in India,” Apple told IANS. Assembling of iPhone 7 began last month.
