

How To Lead The LED LIGHTING BOOM In India

LED lighting boom will stay long in India, on account of the ever-increasing need for smart, connected lifestyles and energy-efficiency measures. Let us catch the pulse of the industry

Sudeshna Das

Consulting

The Indian lighting industry in India is evolving rapidly due to a shift from conventional products to LEDs, driven by an increasing number of government initiatives for energy conservation, rising consumer awareness for energy-efficient products and innovative products offered by the industry in sync with the mega trend of digitisation. This evolution indicates a tectonic shift in technology from electricals to electronics representing significant growth opportunities for organisations offering electronic hardware/components, products and solutions used in LED lighting as well as prototype designers, electronics manufacturing service (EMS) providers and original equipment manufacturers (OEMs). In this

report we try to provide insights about India's LED lighting ecosystem, focusing primarily on market size, opportunities, major demand-generating applications, hindrances that impact growth and emerging technology trends.

Market size

India, being the second most populous country and the fifth major electricity consumer, has been witnessing an ever-widening demand versus supply gap in electricity. Consequently, the market for energy-efficient products, such as LED lighting products, is bound to grow riding on government initiatives encouraging use of LED lights and increasing focus on smart

city projects, efficient public distribution systems, and the ever-increasing need for smart, connected lifestyles and energy-efficiency measures. The Electric Lamp and Component Manufacturers Association of India (ELCOMA) shares that the LED market will grow to ₹ 266 billion by 2020, making the LED market ~ 80 per cent of the total lighting industry.

According to a report by global research-based

Unnat Jyoti by Affordable LEDs for ALL (UJALA)

EESL has distributed over 317.1 million LED bulbs covering all 36 states and UTs. Benefitted 78 million consumers across India through UJALA scheme.

Distributed over
317.1 million LED bulbs

Estimated Energy Savings
41.18 billion kWh

GHG Emission Reduction
33.36 million tonnes

Street Light National Programme (SLNP)

Installed over
7.574 million LED streetlights
in 28 states/UTs across India

Estimated Energy Savings
5.08 billion kWh

GHG Emission Reduction
3.5 million tonnes

Energy Efficient LED Tubelights

Distributed over
6.748 million
LED tubelights

Estimated Energy Savings
295.58 million kWh

GHG Emission Reduction
242,382 tonnes

Outcome of EESL initiatives
in 2018 to boost LED lighting
adoption in India
