

## MARKET SURVEY

consulting firm TechSci, the LED lighting market in India is projected to register a CAGR of over 24 per cent during 2016-2021. The Indian LED lighting market stood at US\$ 918.70 million in 2016, and is projected to grow at a CAGR of 24.66 per cent in value terms during 2016-2022, to reach US\$ 3758.74 million by 2022 on account of the increasing number of government initiatives to boost LED adoption and growing awareness regarding lower power consumption of LED lighting products.

Moreover, easy availability at affordable prices coupled with distribution of LED bulbs by Indian government to promote the use of LED lights over halogens and incandescent lighting products is augmenting the demand for LEDs in the country.

Key factors that are expected to boost the market include declining LED prices along with favourable government initiatives that provide LED lights at a subsidised cost and promote LED streetlighting projects through special ESCO model by Energy Efficiency Services Ltd (EESL). Moreover, rising consumer awareness about the cost-effectiveness, enhanced life, better efficiency and inherent eco-friendly nature of LED lights will continue to drive volume sales from industrial, residential and commercial sectors.

### Opportunities galore

Since LEDs are versatile products, these can be used for residential lighting, streetlighting, downlighting, landscaping, monument lighting, signage, traffic signal lighting, security lighting, industrial lighting, office space lighting, automotive lighting and much more. Low energy consumption, low costs, modular designs and ease of use have made LED lighting the first choice for industrial, commercial and domestic applications.

Major demand-generating application areas are:

- Streetlighting
- Residential lighting
- Office space lighting
- Industrial lighting

Demand for streetlights is driven by government initiatives. Whereas, demand for LED lighting products used in residential and office spaces is mainly driven by increasing consumer awareness about energy-efficient products with more functionalities. Increasing demand for LEDs for industrial areas including warehouse, manufacturing floors and so on is a new trend. In hazardous work areas across industries, most of the new lighting requirements are for LED lighting.

Demand for LED lighting in India is still mostly driven by metro cities due to affordability, awareness and socio-economic growth. However, demand from tier II cities is expected to grow on account of the potential applications for streetlighting and industrial lighting. Demand for LED lighting from rural India is also going to increase significantly, owing to government initiatives (through EESL) for implementing rural LED streetlighting projects of the country by retrofitting conventional streetlights with LED lights in *Gram Panchayats* under Street Lighting National Project (SLNP).

## PROBLEMS ARE ALWAYS HIDDEN, AND WE HELP YOU FIND THEM

Problems like unplanned shutdown, overheating of electrical appliances and connections, insulation problems and harmful gas leakages can lead to a major issues and bring an entire production to a standstill. To tackle these problems and to resolve them on time, FLIR brings a wide range of preventive maintenance solutions which help you identify problems before they arise or start to worsen. Include FLIR's state-of-the-art gadgets in your regular preventive maintenance check-up and make your business operations hassle-free.

### INDUSTRIAL APPLICATIONS:

Electrical & Mechanical | Building Diagnostic  
Automation | R&D | Gas Detection | Firefighting  
Test & Measurement
