

SafetyNet

Visit: www.vistair.com; **Full version:** Paid

SafetyNet by Vistair is a flexible safety reporting and investigation system for quality management in aviation services. It allows the reporter to stay anonymous, too. Report submission is possible via both Web and iOS mobile devices. File attachment option supports different formats for audio, photo and video. After submission, the reporter is informed about subsequent actions through email. Automatic distribution engine (ADE) feature enables speedy distribution of reports for hazard analysis. Benefits include real-time reporting, automated workflow management, data security, filter and search capability, etc.

Aircraft MRO Inspection Maintenance CMMS Audit App

Updated: July 2019

OS: Android

Download: Full version (free)

Aircraft MRO Maintenance CMMS Audit App enables maintenance of digital records for audit, inspection and work orders of any aircraft with support for multiple languages. Reports can be created from the device both online and offline (with cloud auto-sync) and shared instantly. Interface is simple and makes information tracking easy. In case of any defect, an email is sent to the intended person and notifications are sent to users. Users can set reminders for future inspections and maintenance schedules so that they can be notified at the scheduled time. Benefits include reduced overall operations cost, compliance, increased accuracy, faster speed, etc.

Android

Aviation PocketKnife

Updated: September 2019

OS: Android

Download: Full version (free)

Aviation Pocketknife is an app that provides calculations for various flight parameters and other related information. Navigation calculation feature is used to obtain wind speed and direction, non-precision approach, heading ground speed, course ground speed and wind correction angle (WCA). Met calculator option gives such details as minimum usable flight level, density altitude, relative humidity and deviation from International Standard Atmosphere (ISA). Weather information for airports can be obtained with Google Maps. Other options include unit conversion, extra fuel calculation, crosswind calculation, list of aviation abbreviations and more.

Android

Flightradar24 Flight Tracker

Updated: October 2019

OS: Android and iOS

Download: Full version (paid)

Flightradar24 is a travel app for real-time tracking of planes in various countries on a map via the aircraft's transponders or multi-lateration technique. It also allows the user to point the device at a flight to know its details such as route, expected time of arrival, original time of departure, aircraft type, speed, photos of actual aircraft, etc. Search option enables finding aircraft based on flight number, airport or airline. Besides these, details of weather conditions and past data are also available. To get more details, the option for silver and gold upgrades is available on the app.

Flightdocs Enterprise

Updated: July 2019

OS: Android and iOS

Download: Full version (free)

Flightdocs Enterprise app allows access to important maintenance information to aid aircraft operators. Maintenance dashboard lists all necessary information in one place. Users can view and report time of the aircraft. Not only daily ones but such non-routine maintenance items as discrepancies, minimum equipment lists (MELs), non-essential furnishings (NEFs), configuration deviation lists (CDLs) and watchlist items can also be viewed on the app. Other features include due list projections, maintenance item searches, customer service support and so on. The latest version has a touch ID for iOS devices, and fingerprint login for both iOS and Android devices.
