

Laptop

First in India with Alexa built-in

HP Inc. has introduced the new HP Pavilion x360 in India that will reinvent the computing experience for modern consumers. Powered by tenth-generation Intel Core processors, the device can handle multi-threaded workloads and enables immersive entertainment experiences. Performance of these processors is optimised by Intel Dynamic Tuning technology that provides amazing battery life, ultra-fast speed and better productivity. It is engineered for hands-free voice interactions with built-in Alexa app. Consumers can control music, timers, alarms, calendars, smart home devices and more, simply by speaking to Alexa while Web browsing, working or streaming content.

Weighing only 1.58 kilograms, HP Pavilion x360 is a thin and light convertible with four distinct modes of laptop, tablet, reverse and tent, to work, write, watch and play. The device has powerful storage options like 1TB HDD + 256GB SSD and 512GB PCIe SSD6, and optional fingerprint reader. It contains NVIDIA GeForce MX250 GPU that enables higher graphics performance for more fluid media editing, casual gaming and augmented reality (AR) experiences. The new HP Pavilion x360 will be available with Intel in core i3, i5 and i7 configurations.

Smartband

The journey to fitness begins

With six workout modes to choose from, every activity is tracked with accurate data reports for users to study and further improve their regimen. These activities include pool swimming, outdoor running, cycling, treadmill, exercise and walking. Mi Smart Band 4 features a full-colour AMOLED touch display. With five adjustable brightness levels up to 400 nits, users can view the screen clearly even in broad daylight. The band is capable of recording twelve different data sets including pace of swimming, stroke count, distance and more. Along with tracking GPS, users can know their heart rate, pace, intensity and calories burned to improve walking efficiency each time.

Deftly mixing fashion and features into a single wearable device, Mi Smart Band 4 allows users to change the display according to mood. They can select a picture from the gallery or click one and make it the watch face. Mi Smart Band 4 times different sleep cycles, namely, light, deep and sleep quality, which provides a comprehensive sleep analysis, so users can change their sleeping behaviour as needed.

Gaming headphones

Dedicated solution for smartphone and Nintendo Switch gamers

Rapoo, under its VPro series, has announced its newest wired in-ear gaming headphones, VM150. Designed to make even the most casual gamer feel like a pro, VM150 is designed for the growing gaming generation on the smartphone. The oxygen-free copper cable has a flat design that prevents tangling, and the 3.5mm jack has a ninety-degree angled plug and a rubberised, tangle-free cable ideal for gaming in handheld mode. The design with an ergonomic oblique angle and aluminium alloy body allows longer usage, isolating background noise. Silicone ear hooks design ensures earbuds reach deeper and fit snugly in the ears.

The earbuds come with dual-controllable mic, one inline microphone and one detachable microphone, convenient for both streaming and communicating. Three sizes of patented ear tips are provided for optimal comfort and fit. Designed to be lightweight, the headphones do not rely on battery for power, reducing latency.
