

Software For MACHINE LEARNING

Free Daily Utility Tools

- + Office tools: Apache OpenOffice (www.openoffice.org)
- + Zipping software: WinZip (www.winzip.com)
- + Browser: Mozilla Firefox (www.mozilla.org)
- + PDF Reader: Adobe Acrobat Reader DC (get.adobe.com)
- + Media player: PotPlayer (potplayer.daum.net)

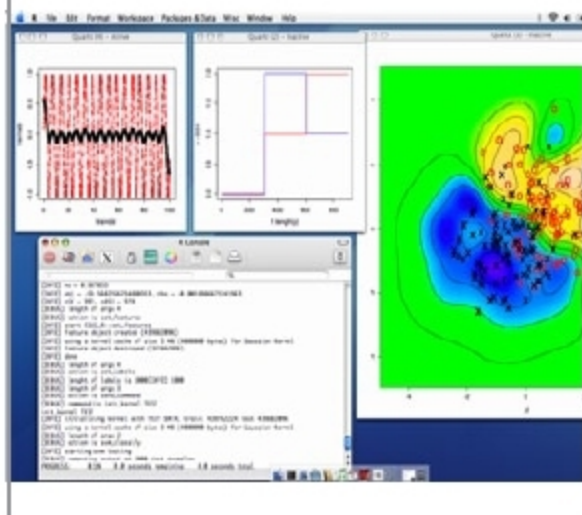

EFY BUREAU

Shogun

Visit: www.shogun.ml

Full version: Free

Shogun is a non-commercial, open source software that provides various algorithms and data structures for implementing machine learning. It is easy to use and provides support for such languages as Octave, Python, Java and Scala. It also supports vector machines for regression and classification. Besides operating systems like Linux and Windows, users can also run it in the cloud by connecting to a Jupyter notebook. Its considerable testing infrastructure ensures fail-safe working on different setups. The software is widely used for research and education purposes.

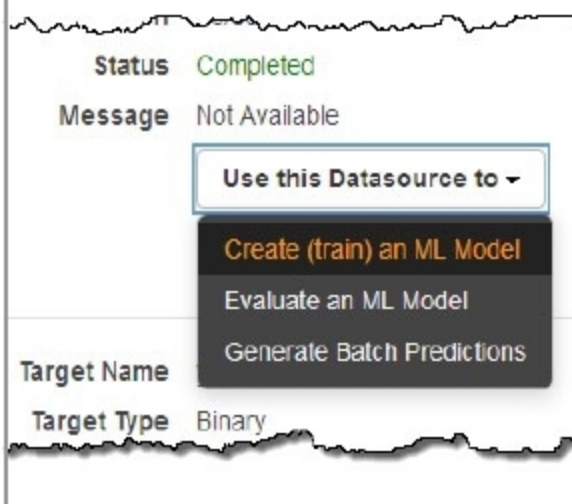

Amazon Machine Learning

Visit: <https://aws.amazon.com>

Full version: Paid

Amazon Machine Learning (AML) is a cloud-based machine learning software that is easy to learn and implement. It uses the information available from various sources including Amazon S3, Redshift and RDS. Users can create data source object through data obtained from MySQL database. The software is aimed at building machine learning models and generating predictions. It supports binary and multi-class classifications, and regression models. It ensures high performance and security for businesses, and is suitable for both beginners as well as experts.

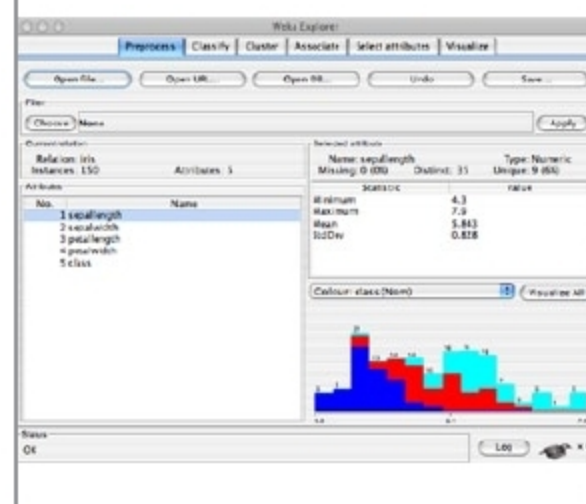

Weka

Visit: www.cs.waikato.ac.nz/ml/weka

Full version: Free

Developed at University of Waikato, Weka (Waikato Environment for Knowledge Analysis) is an open source machine learning software written in Java, and consists of several machine learning algorithms for data-mining tasks. It provides tools for data preparation, classification, regression, clustering and more. It is platform-independent, and algorithms are easy to understand, even for students. It supports deep learning, and is suitable for a wide range of purposes including research and education. Latest releases require Java 8 or above.

Apache Mahout

Visit: <https://mahout.apache.org>

Full version: Free

Apache Mahout by Apache Software Foundation is an open source project aimed at creating extensible and efficient machine learning applications. It can work on large data sets, and includes algorithms for regression, recommenders (collaborative filtering), clustering and so on. It also provides Java libraries for mathematical operations. Earlier, it was based on MapReduce programming model. (Most implementations are based on Hadoop.) With the last few versions, the project now focuses on building a backend-independent programming environment under the name Samsara. It is useful for mathematicians, data scientists and statisticians.
