

TensorFlow

Visit: www.tensorflow.org

Full version: Free

Created by Google, TensorFlow is an open source platform that allows users to create and train machine learning models for desktop, mobile, Web and cloud. It is suitable for beginners as well as experts. It supports several languages and platforms. High-level APIs are based on Keras API standard for neural networks, which improve flexibility. Multiple levels of abstraction enable choosing from a variety of options. Complex topologies can be easily constructed. The latest version comes with improved performance and user experience.

APPS USING Machine Learning

Snapchat

Updated: September 2019

OS: Android and iOS

Download: Full version (paid)

Snapchat is a multimedia messaging app. Users can simply click pictures and add captions or fun effects using available selfie lenses and filters, as well as share them. Filters are based on augmented reality (AR) and machine learning algorithms for computer vision to detect and locate facial features. The app enables users to stay in touch with others through stories, live messaging and video chats. Other features include breaking news and original shows in discover, free cloud storage and location sharing categories. Care must be taken in what users share or send, as data can be saved by others.

Pinterest

Updated: September 2019

OS: Android and iOS

Download: Full version (free)

Pinterest is a social media app that allows users to discover highly-personalised recommendations for a wide range of ideas related to travel, home design, fashion, fitness and cooking, through images, videos and more. Users simply need to snap a picture with Pinterest Lens to know the details of that idea. Machine learning is used in areas such as detecting spam content and users, providing related content, object recognition and advertisement relevance prediction. The app enables collaboration with friends for trips, parties and projects. Users can also save their ideas, organise or share them with others.

Ola

Updated: September 2019

OS: Android and iOS

Download: Full version (free)

Ola is an online cab booking app that covers areas in India, Australia, New Zealand and the UK. Vehicles have onboard GPS for route navigation. After signing up on the app, all available nearby vehicles are displayed on the map once the pickup location is set by the user. The app allows choosing among several options such as Auto, Micro, Mini, Prime Sedan and more. Through machine learning, estimated fare is displayed before the ride is confirmed. The app also provides multiple payment options including cash, UPI, debit/credit card and Ola Money (wallet).

ZoOm Login

Updated: September 2019

OS: Android

Download: Full version (paid)

ZoOm Login uses machine learning for 3D FaceMaps that allow users to replace passwords on smart devices and PCs with webcams using 3D face authentication. With a developer account, they can add ZoOm to apps and Web pages easily. The app is a levels 1- and 2-certified (iBeta/NIST-ISO 30107-3) biometric authenticator, and provides a secure login for different purposes such as payments, insurance and medical. The developer account can be accessed on multiple devices. Only enterprise-level app publishers are charged based on usage.

Android

Google Maps

Updated: September 2019

OS: Android and iOS

Download: Full version (free)

Google Maps app provides real-time GPS navigation, traffic and transit information, which users can apply to get to numerous businesses and places in various countries marked on its map. It uses machine learning for features like predicting parking availability at a specific time. Indoor maps are available in case of such big areas as malls, airports and stadiums. Users can search and navigate without an Internet connection using offline maps feature. Finding their way is faster through automatic re-routing based on live traffic, incidents and road closures. Other features include information about local events, new places and must-try places, real-time voting among groups and so on.
