Brain training game that improves users' concentration

A team from Behavioural and Clinical Neuroscience Institute at University of Cambridge has developed and tested Decoder, a new game aimed at helping users improve their attention and concentration. The game is based on the team's own research and has been evaluated scientifically. The team has demonstrated that playing Decoder on an iPad for eight hours over one month improves attention and concentration. This form of attention activates a frontal-parietal network in the brain.

App for high school and college students

Google has launched a revamped Socratic app for iOS, powered by Google AI (artificial intelligence), providing tonnes of latest options and assets to assist high school and college students. Using this app, students can solve difficult mathematical equations or physics problems. The app even offers a series of manuals and study material for interested people. Students can now take a photo of a question and find answers on the Internet through relevant and credible sources. They can also use voice commands to ask questions and find answers on the Web. The app also helps students understand tricky content. For example, if they have trouble understanding contents of the book or handouts, they can take a picture of the page and view alternative explanations of the same concepts.

AI-powered app for the visually-impaired

Chinese smartphone manufacturer Honor has launched its new AI-powered app PocketVision at IFA 2019, which aims to help people read documents, menus and other hard-to-read texts. There are three available modes in the app: Text-to-Speech, Zoom-In and Negative Image. Text-to-Speech mode helps convert pictures to text faster and more accurately, and then narrates the text from books, documents, menus and more, with ease. Zoom-In mode allows users to zoom into text using volume buttons on their device. And Negative Image mode provides a range of colour filters to enhance text. PocketVision can be downloaded from Huawei AppGallery, and supports English, Portuguese, German, Spanish, Italian and Chinese languages.

A meeting room solution designed for modern Indian workplaces

Plantronics Inc. has launched Poly G7500, a video device that combines content collaboration and video-conferencing capabilities in one device. G7500 integrates advanced audio features, wireless content sharing and ultra HD 4K video, creating an immersive audio and video experience for mid- to large-sized conference rooms. It incorporates an interface that is intuitive and easy to navigate, and a deployment-friendly architecture makes it simple and cost-effective to install. G7500 is intended for users including, but not limited to, business leaders, IT and facilities managers, AV specialists and healthcare professionals.
