

## DIGITAL TACHOMETER

In “Build non-contact type digital tachometer” DIY article published in July issue, I have a doubt. If we count the number of pulses and total time, will there be better resolution?

**Namdeo bhagwan Patil**

*The author A. Samiuddhin replies:*

Thank you for showing interest in my article! This is similar to the published option. If time period of pulses is calculated, then it is frequency measurement. But we need the number of pulses per second, because resolution depends on the number of pulses (that is, number of metal targets). So, if the number of pulses is counted per second, then rpm can easily be counted by using the following relationship:

$$\text{rpm} = [\text{interrupt count per second} \times 60 (\text{secs per min})] / \text{number of metal targets}$$

...

## TOUCHLESS WATER DISPENSER

This is regarding “Touchless Drinking Water Dispenser Made in India” article in Innovation section published in February 2018 issue, and also available on your website, <https://electronicsforu.com>. It is an interesting startup project! However, placing the hand over the outlet and drinking cup may still cause infections. I may suggest the maker/designer of this system to separate the sensor switch from the running tap.

**David Itohowo**

❑ Interesting project! I suggest placing the proximity sensor at the bottom so that whenever you bring the cup closer to the outlet, it automatically opens the tap.

**Pradeep Kumar ML**

*The designer Bhrigu Chadha replies:*

Thanks for the readers’ thoughts! Sensor at the bottom was the initial design; however, even in washroom sinks, there is a small lag when the hand or vessel is taken away, leading to wastage of water. However, for drinking water there is no

## Innovators

“India’s Own GPS Soon Will Be Reality With the Launch Of Vehicle Tracking Module – UTRAQ” article available on your website, <https://electronicsforu.com>, is good for India.

**John Nielsen**

❑ The vehicle-tracking module mentioned above is already available.

**Vishal Saini**

“Gill Sense: Pocket-Sized Device to Turn Utilities Smart” available on your website, <https://electronicsforu.com>, is an interesting article.

**Vaddi Malleswary**

This is regarding “An Automated Navigation Technology To Reduce Road Accidents” article available on your website, <https://electronicsforu.com>. An alternative would be to use speed data based on GPS and time, something that Google has got from its map users/drivers. Using speed data, slowdown points could be identified, and using aggregated data from multiple drivers, potholes/humps could be highlighted.

Using open-street-maps-based navigation instead of Google Maps would be a great idea to implement.

**Ramesh D.**

**EFY.** Thanks for the feedback!

drainage in case the water drips; also, it is drinking water. We have tried to give priority to conservation of water. So far, no one has been able to avoid this lag in any sensor.

...

## SENSORS AND AI ARTICLES

“Applications and Benefits of Emotion-Sensing Technology” article in Sensors section published in July issue is quite interesting! The author (Dr S.S. Verma) creates excitement in every issue.

Also, the Artificial Intelligence section is interesting. Thanks to the authors and EFY team!

**U.M. Prakash Edison**

## ELECTRONIC PILL

“Electronic Pill, The Holy Grail Of Healthcare Technology” article published in April issue, and also available on your website, <https://electronicsforu.com>, is an informative article. I learnt a lot about the topic. Thanks for publishing the article!

**Joyce Valencia**

...

## AI AND THE IoT

“AI and the IoT: Leveraging Digital Disruption” article published in February issue is very interesting. Thanks for sharing such an excellent writeup!

**Suri Babu Mylapilli**

Head ASU DevOps COE,  
Tata Consultancy Services

...

## 5V DC TO 48V DC CONVERTER

“5V DC To 48V DC Converter For Phantom Power Supplies” DIY article published in May issue, and also available on your website, <https://electronicsforu.com>, is a nice project.

**Saibal**

❑ “5V DC To 48V DC Converter” project is superb!

**Suresh G.**

❑ Instead of using the designed PCB layout, can I directly use veroboard for wiring “5V DC to 48V DC Converter” circuit?

**Aakash Rohila**

**EFY.** Thanks for the feedback! You can wire the circuit on a veroboard or even breadboard for testing.

...

## AUDIO AMPLIFIER

This is regarding “Voltage Regulator as Audio Amplifier” DIY article published in April 2018 issue, and also available on your website, <https://electronicsforu.com>. I was just looking for a cheap and rugged mono amplifier. Thanks for publishing this project!

**Udit Ameet Kotnis**

**EFY.** Thanks for the feedback!
