

COMPONENTS

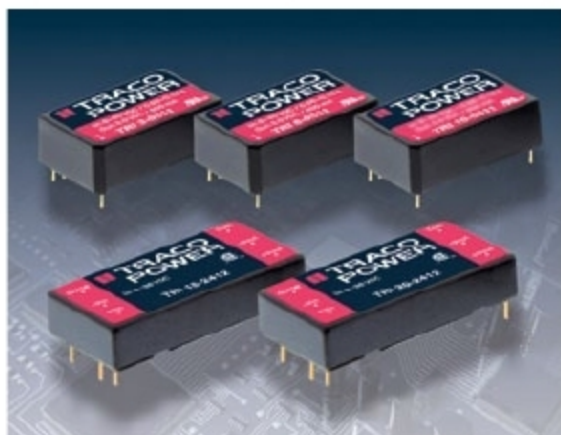

Microcontroller

Nuvoton Technology has launched a low-power, robust security M261/M262/M263 series microcontroller (MCU) designed for Internet of Things (IoT) applications. It is based on Arm Cortex M23 secure core for Armv8-M architecture, running up to 64MHz with 512kB flash in dual-bank mode supporting over-the-air (OTA) firmware update and 96kB SRAM.

DC/DC converters

Traco Power has announced the release of its TRI series of high-voltage DC/DC converters featuring five power ranges.

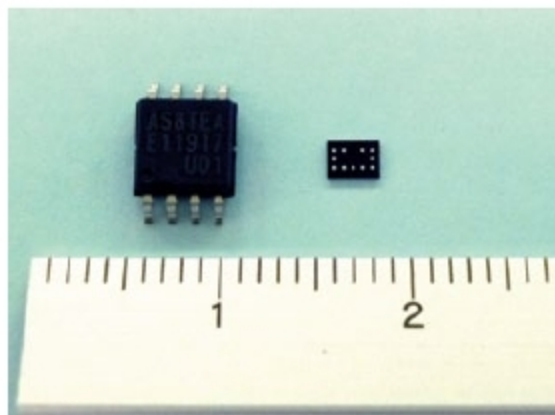

The 3.5-, 6- and 10-watt models feature 7071V DC I/O isolation/9000V DC peak isolation up to one second in the compact DIP-24 package. The 15- and 20-watt models feature 5940V DC I/O isolation/8000V DC peak isolation up to one second in a compact footprint. All models feature 1000V AC working voltage and common-mode transient immunity (dv/dt) of 15kV/μs.

Resistive RAM

Fujitsu Electronics has released 8Mbit resistive RAM (ReRAM), 1 MB85AS8MT, which has the world's largest density as a mass-produced ReRAM product. This

product has been jointly developed with Panasonic Semiconductor Solutions.

MB85AS8MT is an EEPROM-compatible non-volatile memory with SPI-interface that operates with a wide range of power supply voltages, from 1.6V to 3.6V. One major feature of this memory is an extremely small average current for read operations of 0.15mA at an operating frequency of 5MHz. This enables minimal battery consumption when mounted in battery-operated applications with frequent data-read operations.

Battery management IC

Renesas Electronics has announced its fourth-generation lithium-ion battery management IC that offers lifetime accuracy. ISL78714 provides accurate cell voltage and temperature monitoring,

along with cell balancing and extensive system diagnostics to protect fourteen-cell lithium-ion battery packs while maximising driving time and range for hybrid and electric vehicles.

Serial memory controller

As computational demands of artificial intelligence (AI) and machine learning workloads accelerate, traditional parallel attached DRAM memory has presented a major roadblock for next-generation CPUs, which require an increased number of memory channels to deliver more memory bandwidth. Microchip Technology has expanded its data centre portfolio and its entrance into the memory infrastructure market with a commercially-available serial

memory controller. SMC 1000 8x25G enables CPUs and other compute-centric systems-on-chips (SoCs) to utilise four times the memory channels of parallel attached DDR4 DRAM within the same package footprint.

Serial TTL-to-Ethernet module

USR-TCP232-T2 is a serial TTL-to-Ethernet module that can realise data's bi-directional transmission between serial TTL and RJ45 port. It is based on Cortex-M0 core. It supports data transferred over LAN network or Internet to a remote serial port. Features are:

- Cost effective
- VCC 3.3V or VDD 5V
- Webpage configuration/DHCP and DNS
