

SMARTPHONES FOR A PREMIUM GAMING EXPERIENCE

Nijhum Rudra

Gone are the days when gaming could only be done on computers and laptops. Massive popularity and resurgence of smartphones have made gaming even more popular among people, especially the youth. Now phones are not only meant for calling and texting, these have become useful in more ways than one—from online banking to shopping and keeping track of our daily activities.

Technology evolution of the smartphone has made gaming a billion-dollar industry, which developed from old feature phone games to modern 2D and 3D gaming consoles. Sophisticated gaming smartphones have not only a cutting-edge chipset but also have more internal storage for downloading numerous apps. Powerful software makes these phones user-friendly for playing games.

In this article we present some of the top gaming smartphones of 2019, which will help you play power-packed 2D and 3D games without any hardware or software glitches.

ROG Phone by ASUS

A powerful battery is important in a gaming device. This phone is powered by Qualcomm Quick-Charge 4.0 fast charging, which charges sixty per cent of the battery in only thirty minutes.

ROG Phone by ASUS
