

An Authorized **arm** Distributor

Arm Development Studio

Arm Development Studio supports all types of software development projects from architecture exploration to the development of real-time applications and coding for edge devices. It accelerates system design and software development, enabling you to get higher quality products to market faster and cost-effectively.

Performance

Scalability

arm Keil MDK

Keil MDK includes all the tools needed to get Cortex®-based MCUs to market quickly – from creating simple machine learning nodes at the edge to building sophisticated devices certified for functional safety. Keil MDK is available to buy as a standalone solution or as part of Arm Development Studio.

ULINK Family

A ULINK debug adapter connects your PC's USB port to your target system (via JTAG or a similar debug interface) and allows you to debug, trace and analyze embedded programs running on the target hardware.

DSTREAM Family

Arm DSTREAM high-performance debug and trace enables powerful software debug and optimization of any Arm processor-based hardware target. Developers can leverage the full debug and trace capabilities of the Arm Development Studio on Arm architectures.

GSAS Micro Systems Pvt Ltd

- Embedded Development Tools
- Board Diagnostics
- Development Boards
- Digital Microscopes
- EDA Tools
- Embedded PC Modules
- Logic/Protocol Analysers
- Programming Tools
- Test & Measuring Instruments
