

NuMicro® M261/M262/M263 Series

Low Power Robust Security Microcontroller
for IoT Applications

The brand new NuMicro® M261/M262/M263 series microcontroller is designed for IoT applications. It features low power and robust security by implementing novel low power technology, secure boot function, and hardware crypto engine. It also integrates rich peripherals to fulfill comprehensive IoT application scenarios. The competitive features of M261/M262/M263 include -

- Arm® Cortex®-M23 core for Armv8-M architecture, runs up to 64 MHz with 512 KB Flash and 96 KB SRAM
- Low power consumption: 45 μ A/MHz @ normal run with DC-DC; < 2 μ A @ Deep Power Down mode
- Supports eXecute-Only-Memory (XOM), hardware Crypto, and secure boot function
- Supports SDHC 2.0, USB 2.0 Full-speed OTG, and CAN Bus 2.0B

NuMaker-IoT-M263 development board is launched to accelerate the product design process. With the Nuvoton IoT software package, it's easy to connect the cloud of Arm Pelion, Amazon AWS, and Ali-Cloud. It also integrates -

- 9-axis sensor: acceleration, gyro, and magnetics
- Environmental sensor: gas, barometric pressure, temperature, and humidity
- Connectivity modules: Bluetooth, Wi-Fi, and LoRa. 2G/3G/4G-LTE/NB-IoT module with GPS is available for purchase.
