

CoolMOS™ CE – High voltage MOSFET for consumer applications

CoolMOS™ CE is a product family launched by Infineon to address consumer and lighting applications. It offers benefits in efficiency and thermal behavior versus standard MOSFETs and has been optimized for ease-of-use and cost competitiveness, while at the same time delivering state-of-the-art performance and Infineon quality and supply security.

Powered by Infineon multi-source program, CoolMOS™ CE is determined to support customers' success in various consumer markets by full FAE (field application engineer) support, short lead time and fast quote response.

Customer benefits of CoolMOS™ CE

- › **Capacity** – we own the world's largest capacity for power devices with two fabs on 300mm production, two fabs on 200mm production and four backends
- › **Lead time and delivery performance** – our lead time for CoolMOS™ CE products is typically faster than 4-6 weeks. We offer highest supply security and are able to fulfill more than 96% of orders before the committed delivery date
- › **Quality** – our field failure rates are as low as 0.1 PPM

Key features of CoolMOS™ CE

- › Narrow margins between typical and max $R_{DS(on)}$
- › Reduced energy stored in output capacitance (E_{oss})
- › Good body diode ruggedness and reduced reverse recovery charge (Q_{rr})
- › Optimized integrated gate resistor (R_g)
