YOUR SUGGESTIONS

ARTIFICIAL INTELLIGENCE

I find EFY very interesting and useful. After 'artificial intelligence' in June issue, I suggest you also cover 'machine learning.'

Rutuja Chaudhari

Through e-mail

EFY. Machine learning (ML) is not different from artificial intelligence (AI). It is a type of AI, which enables computers to learn rather than being explicitly programmed for every use-case. We have published several articles on ML, including deep learning, which is the latest trend in this space. Deep learning algorithms help a computer to autonomously learn, like a human does, and use this knowledge to react to different situations. We will continue to cover latest developments in machine learning in the coming issues.

Electronics Projects

In 'Arduino Based Digital Capacitance Meter: An Interrupt Based Approach' DIY project published in March issue, can we measure the values of unpolarised capacitors?

Sayantan Maiti

EFY. Yes, you can measure the values of polarised and unpolarised capacitors.

The 'SMS Alert System' DIY article published in November 2016 issue is interesting. For the app to operate, should I keep my computer connected to the Internet all the time?

Elan

EFY. As explained in the article, the project is based on cloud communication platform and so your computer should be connected to Internet all the time.

Please share specifications of the solenoid lock used in 'Fingerprint Door Unlock System Using Arduino' DIY project published in Jan. 2016 issue.

Vyshnavi

EFY. We have used an Elock-S210M electric strike. It is a stainless-steel, fail-secure type electric lock with dimensions of 150x39x31 mm³.

Applying electric current to the strike causes it to unlock. Its operating voltage and current are 12V DC and 450mA, respectively.

topics 'Machine Learning Basics For Newbies' and 'How Artificial Intelligence is Shaping the Healthcare Industry' published in February and May issues, respectively.

PC-BASED OSCILLOSCOPE

I am a great fan of EFY, especially its DIY section, and I thank you for every bit of knowledge the magazine shares. I am trying to assemble the 'PC-Based Oscilloscope Using Arduino' DIY project published in June issue. I have

extracted the zip folder files to my PC, but can't use the PCScope file as it is password-protected. Please help.

EFY. When you download the source code of this project from source.

efymag.com, you will find three folders including a Password folder. You can get the password '1234' from a text file of the password folder.

EFY ARTICLES

EFY July issue featured 'How Technology Is Helping Specially-Abled People' article as also a 'Wearable System To Help Visually Impaired Navigate' under Tech News section.

I would like to share that something similar was invented in India too, way back in 2013-14. The URL to this information is <http://bit.ly/2hkDm3C>

Kunal A. Bhat

EFY. Thanks for sharing the information!

WIRELESS WATER LEVEL INDICATOR

Great things are always beautiful such as DIY projects in EFY! Can I add a relay to 'Wireless Water Level Indicator Without Microcontroller' DIY circuit published in July 2016 issue to control a single-phase 1HP motor?

Abdul Razakh Edakat

Through e-mail

EFY. Thanks for your feedback and interest in the circuit! Yes, you can add a relay, but with additional control circuitry to turn the motor on and off.
