

Infineon's optimized solution for wireless power and drives

BSZ0909ND half-bridge

The BSZ0909ND is a perfect match for both wireless charging and drives architectures. It is a perfect fit for designers who target to simplify the layout and significantly save space without compromising on efficiency.

The OptiMOS™ technology used, combined with the PQFN 3X3 package, offers an optimized solution for DC-DC applications with space critical requirements.

Further, the BSZ0909ND is a leading product in the industry when it comes to fast switching. It has an optimized figure-of-merit for gate charge times to achieve low switching and conduction losses.

Benefits of Infineon's solution:

- › Low switching losses
- › High switching frequency operation
- › Lowest parasitics
- › Low operating temperature
- › Low gate drive losses
- › Fully RoHS compliant 6/6 lead free product

Reduce drastically the size, losses and temperature of your designs with Infineon's BSZ0909ND half-bridge.
