

Get Light of 18W LED Tube in Just 12W Only!

Now Switch To 4-foot T-8 ULTRA HIGH EFFICIENCY PowerLED Tube Light
(Power Consumption 12W only; SAME light output)

ULTRA HIGH EFFICIENCY
33%
Lower Power Consuming

MOST EFFICIENT POWER RATING LED TUBE LIGHTS IN THE MARKET!

While most comparative competitive LED tubes achieve a lumen output of 1600 lumens at 18W approx., the BINAY ULTRA HIGH EFFICIENCY QUADRA-12ES PowerLED Tube Light is designed for 2000 source lumens at a 33% lower power consumption of 12W, thus achieving considerable power savings (apart from much longer maintenance free life). The light output performance is equivalent to that of the 1200mm T-8 fluorescent tube.

5 YEARS Warranty WITH AN ESTIMATED LIFE OF 12-15 YEARS

POWERING LED TECHNOLOGIES WORLDWIDE SINCE 1983

Cardboard cutout allows for virtual reality experience through smartphones

beginners can make mistakes without any fear. King's College Hospital in London is already using VR to make magnetic resonance imaging experience less scary for children.

Somewhere down the line, we could move from watching the news to living it via live streaming VR. VR is already advancing rapidly in gaming, and it is only natural to branch out to other fields.

Advancing standards of VR

As per reports, Everest VR experience uses more than 30,000 high-resolution photographs and creates a computer-generated 3D imagery model using Stereo photo-grammetry. It involves estimating the 3D coordinates of points on an object and employing measurements made in two or more photographic images taken from different positions.

The advertisements about VR do not do any justice to the capabilities of VR. The best way to appreciate is to experience it first hand, no holds barred. At least, the experience of hitting your head on the walls of your room while wearing the VR headset could be something you would remember for a long time.

If experiencing a whole different world that you might not be able to visit anytime soon was not incentive enough, VR is expected to help with peaceful sleep as well. Medical device maker Fisher Wallace is all set to improve VR experiences by manipulating chemicals inside the human brain. Kortex, a VR headset accessory for stress management, attaches to the VR headset strap and helps the brain in producing endorphins and serotonin for mood balance. It also helps lower stress hormone Cortisol and increases melatonin production for a good night's sleep.

VR moving towards visual clarity and acuity.
