

for academicians looking to enter development professionally.

Curiosity boards from Microchip are also an interesting addition. Based on PIC32 microcontroller, these allow for the IoT and connectivity application development.

Mbed initiative from ARM is another option for programmers. It provides an ecosystem for the development of IoT devices, so that part-time developers can join the race.

And, if things were not diversified enough, developers have successfully added JavaScript and .Net platforms to the mainstream environment of C and C++ for usage in development boards to allow software aficionados to enter the game.

Ever since the launch of Raspberry Pi, the definition of computing has changed radically. Tinkerers have started using Raspberry Pi to make robots, data accumulators, phones and desktop computers. Applications are only limited by one's imagination.

SOME POPULAR GENERAL-PURPOSE DEVELOPMENT BOARDS

Name	Features
C.H.I.P	1GHz processors powered by Allwinner R8 - Embedded Bluetooth 4.0 and Wi-Fi 4GB storage - No HDMI
MediaTekLinkIt One	- Chipset based on MT2502A (ARM7) at 260MHz - GPS, GSM, GPRS, Wi-Fi and Bluetooth - Compatible with boards like Arduino
Orange Pi 2G-IOT	- RDA Micro 8810PL ARM Cortex A5 processor up to 1.0GHz 256MB on-chip LPDDR2 RAM, 512MB on-chip SLC NAND flash, 256KB L2 cache, Vivante GC860 3D GPU and GSM/GPRS/EDGE
Samsung Artik 530	1.2GHz quad-core Cortex-A9 SoC with 1MB L2 cache 512MB LPDDR3 RAM, 4GB eMMC 4.5 flash - Dual-band 802.11n Wi-Fi, Bluetooth/BLE 4.2 and 802.15.4 (ZigBee/Thread) radios
SmartMachine by Thingsquare	- CC1310 based sub-1GHz cortex M3 processor - AES-128 security module - Five GPIOs with double power sources, that is, USB and battery
Arduino MKRZero	- SAMD21 Cortex-M0+ 32bit low-power ARM MCU up to 48MHz 32kB SRAM, 256kB flash with 8kB flash memory for bootloader - No EEPROM

BeagleBoard is another popular board for engineers who like working on Linux. The top-of-the-line board consists of 2GB DDR3 RAM

and 4GB 8-bit e-MMC onboard flash memory. With 3xUSB 3.0, eSATA, HDMI and 2xEthernet, it is a serious contender for top performance in

3000 hours economy electrolytic capacitor

RL Series

RL series

FUTURE

- 1, 105°C 3000 hours
- 2, Cost advantage
- 3, Technology guarantee.

BACKGROUND

- In the series of design is mainly based on the development of new technology of electrolyte, Retaining the long-life products manufacturing process and jointly develop with suppliers for raw materials of special technology. To keep our price in advantage

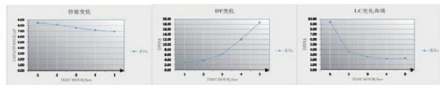

Cost reduction

Available production.

WV (VDC)	Cap (μF)	ESR (mΩ)	额定纹波电流 (Ripple current) (mA)	WV (VDC)	Cap (μF)	ESR (mΩ)	额定纹波电流 (Ripple current) (mA)
