

LCD driver

ROHM Group company LAPIS Semiconductor has launched 32-bit microcontrollers, ideal for data loggers used in logistics for acquisition and management of environmental information during package shipment. The ML630Q464/466 integrate all major functions required for data logging, data acquisition, data display and PDF file generation on a single chip.

Graphic blue LCD

The newly-launched graphic blue LCD is used for displaying alphanumeric characters and other kinds of simple graphics.

The LCD has optimum durability and high compatibility with various modern devices such as ports and USB.

Accelerometer

ST's LIS2DW12 3-axis accelerometer delivers superior accuracy, flexibility and energy savings by supporting multiple low-power and low-noise settings. A new member of ST's low-power, high-performance MEMS product family, LIS2DW12 has 16-bit output and can be set to prioritise low power consumption or low-noise performance.

Boost regulator

With the industry's highest efficiency and lowest quiescent current of only 300nA, the new MAX17222 nanoPower boost regulator from Maxim Integrated enables the longest battery life in the smallest form factor for wearable and consumer IoT designs. The 0.4V to 5.5V input, 1.8V to 5V output boost regulator with 500mA input current limit reduces solution size by up to 50

per cent compared to similar products.

LEDs

Citizen, Japan, has introduced PSL 445 and PSL 440. While PSL 445 high-power SMD package boasts an efficacy of 161lm/watt (at $T_j = 85^\circ\text{C}$), PSL 440's tiny LES packs a lumen density of 107lm/mm². While PSL 445 is good for outdoor applications, PSL 440 helps design products with narrow-beam spot requirements.

MISCELLANEOUS

Quad-band GSM/GPRS modem

This new device has features like:

- RS232 port
- Operating voltage of 5-12V
- Standard AT commands
- Integrated TCP/IP protocol
- Onboard SMA connector
- GPRS uplink and downlink transfer speed up to 85kbps

Software-defined radios

Specifically designed for OTA signal acquisition and analysis, the new USRP-2945 and USRP-2955 software-defined radios feature a two-stage super-heterodyne architecture, extensive frequency range and 80MHz of instantaneous bandwidth per channel. With four independent receiver channels that support local oscillator sharing for phase coherency, the devices are ideal for spectrum monitoring, signals intelligence and direction finding applications.

Flux remover

MG Chemicals' new heavy-duty flux remover is specially formulated to dissolve and remove the most stubborn, encrusted, hard, baked-on fluxes and residues left on parts after soldering. It penetrates quickly to remove non-ionic and ionic contaminants left on the non-component side circuit boards.

Power supplies

Kusam-Meco has introduced a series of DC-regulated power supplies. These have high stability, digital display and low ripple, and are available with output voltage variable from 0-30V in different capacity 2A, 3A, 5A and 10A, and single- and dual-channel outputs.

Automatic pull winding machine

The new pull winding machine (HT-500) is designed to handle windings with fewer turns and critical inner diameters. These machines are meant for high-volume production. Some features are:

- Program cascading
- Single- and twin-wire multilayer winding
- Precision hybrid stepper motor-driven wire loop arm and core indexing
- Wire gripping, core indexing and hook operation
