

## Are You In Suspense?

**Are you wondering what happened to your order or payment, even after a fortnight? But did you mention your name and address clearly while sending payment, and what the payment was for?**

We get several payments every month without adequate instructions or even identity of the person sending the payment. As a result we are unable to take appropriate action on these, till we get a complaint - if at all.

At EFY, we want you to be our satisfied customer. So please do let us know in case your payment or instructions are not even acknowledged within a fortnight. We are not that lazy!

Technology Drives Us

## Major contributors to this report

- > Ajay Durrani, managing director, Covestro
- > Anil Bali, vice president, Deki Electronics
- > Biju Philip, managing partner, EMT India
- > Biju Thomas, proprietor, Superior Flux & Mfg Co.
- > Chetan Uchil, partner, Alpha Conformal Coating
- > Emmanuel David, manager, R&D, Speedofer Components
- > Madhusudan M., director, SCH Coating Solutions
- > P. Gajral, director, Drive Technology
- > Rajaram M.P., regional sales manager, Henkel Adhesive Technologies
- > Rushabh Solani, director, Prime Electrochem
- > Suresh P.M., director, Sysco Tech Systems (India) Pvt Ltd

### 3. Solder pastes

Silicone chemicals are imported in bulk. Advanced conformal coatings are also imported as these are not manufactured locally. According to survey participants, there is a huge gap between demand and local supply in this category, and cost-effectiveness plays a big role in the market. Chinese and Korean products have captured a big market share. PCB chemicals and fluxes are also imported, as no manufacturing is done in the country.

### Polymers gaining importance

The electronics industry is undergoing rapid transformation. The high-paced adoption of smart devices and gadgets among millennials has warranted manufacturers to look at materials with utmost seriousness. Currently, the biggest trends in electronic gadgets are design for freedom and new look and feel. Gadgets have become thinner and smaller, and are now fused with properties that increase their lifecycle/shelf-life.

Properties like high flowability, stiffness, good cosmetics, easy processing, flame retardancy and dimensional stability are in demand. According to industry experts, polymer composites can achieve unmatched levels of performance in strength, flexibility and aesthetic freedom. Thus, polymers provide limitless possibilities for industrial research, design and development in the electronics industry.

The electronics industry is using tailored polycarbonate-based polymer products that offer the strength of conventional materials at half the weight. This, in turn, facilitates innovative manufacturing techniques that allow design for freedom without increasing the cost. One such example is notebooks and tablets, which use polycarbonate composites to achieve amazing reductions in manufacturing process and weight, bringing benefits of resource savings as well as convenience.

### Looking forward

The Indian market is characterised by the presence of several well-established global, regional and local suppliers. Competition in the market is expected to intensify due to the expansion of product portfolios and technological advances. Considering the growing importance of this market, a few global players have already set up production units in the country. This is expected to bridge the demand-supply gap to a certain extent.

Given the huge domestic demand for electronic components and products, development of the electronic chemicals and materials industry will also help the entire electronics manufacturing ecosystem to achieve long-term sustainable growth in line with Make in India initiative. To develop a strong components industry, we first need to have a local ecosystem for raw materials. **EFY**
