

CENTRALIZED VIDEO SURVEILLANCE FOR MULTI-LOCATED ENTERPRISES

MORE LOCATIONS • MORE VISIBILITY • MORE CONTROL

Multi-location enterprises are often under false notion of being secured when they use scattered video surveillance products. Their vulnerability is exposed when the products remain meek spectators during critical incidents. These scattered products do not provide an integrated solution offering much needed visibility and control for multi-location organizations.

Unlike traditional CCTV products, Matrix SATATYA is a professional video surveillance solution specifically designed for serious deployments. It offers live viewing, real-time alerts and instant switching between live and stored video streams from remote locations eliminating distance and time barriers.

No wonder, many progressive organizations including **Schneider, Tata Motors, Dnata, Samsung, General Electronics (GE), Airport Authority, Indian Railways** and many more are relying on Matrix SATATYA for their video surveillance needs.

MATRIX SATATYA
