

Electronics Projects Vol. 26 is the latest volume in the series, available in digital form.

It is a compilation
of 21 construction
projects and 71
circuit ideas published
in Electronics For You
magazine.

This collection of tested
circuit ideas and construction
projects in a handy volume
would interest all classes of
electronics enthusiasts—be
they students, teachers,
hobbyists or professionals!

Electronics Projects Vol. 26
is available on the following
digital magazine stores:

- www.lulu.com
- www.magzter.com
- Createspace.com
- www.readwhere.com

Cutting-edge Hyperloop station proposed by RB Systems (Source: <https://wordlesstech.com>)

the first draft of this shell on a real pod, simulations were run to ensure that the structural integrity would not be jeopardised.

A major problem faced was that one change demanded more changes to be made. For example, changing the shell gave rise to the problem of some parts of the pod being too weak, thus making them very vulnerable to breaking upon the pod's braking. It was only with the support of high computing capacity that the team was able to carry out iterations fast and take quick decisions—such as, which shell shapes were to be rejected. Access to the computational servers allowed larger and more accurate simulations, making it possible to complete several weeks of work in a few days.

Hyperloop in India

The Indian government has been toying with the idea of building bullet

trains in the country, which is very capital-intensive. For example, the proposed bullet train project between Ahmedabad and Mumbai is estimated to cost about one trillion rupees (\$15 billion).

However, Hyperloop is emerging as a much cheaper and more effective alternative. It will provide paths to leapfrog Indian transportation by providing a faster, non-disruptive, pollution-free option to move both passengers and cargo. Hyperloop fits in well with the Mission 350 Plus Initiative declared by the Ministry of Railways in August 2016.

The Mumbai-Bengaluru-Chennai corridor with future plans to include Delhi, Hyderabad and Pune is on the anvil. The concept of Hyperloop will dramatically reduce the Mumbai-to-Delhi travel time to just 90 minutes. The tube line between Mumbai and Pune, a road distance of 150km, could be covered using the existing
