

BEL showcases capabilities at Defense & Security Exhibition, Thailand

Navratna defence PSU Bharat Electronics Ltd (BEL) showcased its capabilities at the *Tri-Service Asian Defense & Security Exhibition, Conference and Networking Event 2017* held in Thailand recently. The highlight of BEL's product display was the upgraded L70 Gun for the Indian Army.

Wipro Lighting, Cisco collaborate on smart lighting

LED lighting solutions provider Wipro Lighting has now become a Cisco Digital Building Solutions provider for connected lighting. The collaboration will enable Wipro Lighting to simplify convergence of its lighting solutions with building automation systems over IP without compromising lighting efficiency, maintenance, product life and security.

Zicom bets big on IoT

Electronic security systems player Zicom is looking at significant growth in the Internet of Things (IoT) and SaaS marketplace to clock a service revenue of about ₹ 2 billion by 2020.

TSSC and Udacity to jointly drive skill development

Telecom Sector Skill Council (TSSC) has partnered with Udacity India to complement skills imparted by the vocational system and provide better livelihood opportunities. Under the partnership, students will have access to Udacity Nanodegrees, which features curriculum built by Silicon Valley leaders and taught by expert instructors.

Renesas sets up centre to foster NEV innovation

To develop semiconductor solutions for use in new energy vehicles (NEVs) for Chinese market, Renesas has established a New Energy Vehicle Solution Center directly under the China Business Unit. Its new centre will unify in a single business unit sales, marketing, design and development, and manufacturing functions for the Chinese market.

project falls under affordable healthcare category of electronic system design and manufacturing (ESDM) programme.

UBS will design high-power RF circuitry and signal processing electronics, while Kaynes will provide the packaging and manufacturing expertise required for creation of high-performance, high-reliability amplifiers, which will be used in both new and legacy MRI scanner installations. The project is expected to complete by early to mid 2019.

Sony aims India comeback via made in India smartphones

Sony India is planning to re-enter the crowded yet competitive smartphone market in India via locally made devices in partnership with the largest contract manufacturer in the world. The Japanese electronics major will make in India two models in the ₹ 12,000 to ₹ 15,000 range—one of the fastest growing segments in the industry—through Foxconn's India unit Rising Star Mobility, which has five

plants in Sri City, Andhra Pradesh.

"Customer interest is exceedingly high in the smartphone category in India, particularly the mid-segment, and we would like to leverage this demand with the launch of our mid-segment smartphones, exclusively for India," said Kenichiro Hibi, managing director, Sony India.

Hero Electronix' Tessolve acquires analogue business of AnalogSemi

Hero Electronix, a part of the \$5 billion Hero Group, has acquired analogue design business of Bengaluru-based Analog Semiconductors. The acquisition was made through Tessolve, a Hero Electronix venture into engineering services. The acquisition adds to Tessolve's analogue design services offering and strengthens its capabilities as an end-to-end provider of engineering services.

Hero Electronix and its group companies aim to build engineering-led businesses in technology and electronics. Hero Electronix' revenue at the end

of FY 2017 stood at ₹ 6 billion, with Tessolve being a key contributor growing at 40 per cent year-on-year.

Google announces Mobile Developer Fest in India

In line with the objective to train two million developers in India on the latest mobile technologies, Google has announced Mobile Developer Fest (MDF)—a new campus initiative to inspire thousands of young, aspiring technology developers to kickstart their skilling journey with affordable world-class skilling and education programmes in India.

The MDF is designed to be a day-long event for computer science and engineering students, offering them an opportunity to attend tech sessions across multiple product areas like machine learning, Firebase, Android and progressive web apps. Students can also participate in hands-on code labs sessions, and learn directly from Google certified developers.

Google will hold multiple MDFs in leading engineering colleges across twelve states in India. Students can register their interest for the upcoming MDF near them on <https://events.withgoogle.com/mdf>.

NI showcases industrial trends at NIDays 2017

National Instruments (NI) successfully hosted the 14th edition of its annual conference on graphical system design NIDays recently. Held in Bengaluru, the event was attended by over 700 engineers, scientists, and experts from the industry and academia, who discussed the trends, opportunities and challenges that will enable the future technology to grow faster.

At the seminar, NI India discussed the next generation of LabVIEW software, LabVIEW NXG 1.0, which gets faster engineering insights with instant hardware discovery, integrated data analysis, and interactive data exploration tools. The attendees got to experience LabVIEW NXG 1.0 and LabVIEW 2017.
