

AHEAD OF WHAT'S POSSIBLE™

ANALOG DEVICES AND LIGO
ADVANCE SCIENCE WITH
AMAZING SOLUTIONS.

For decades, LIGO (the Laser Interferometer Gravitational-Wave Observatory) searched for gravitational waves, ripples in the fabric of space-time. In September 2015, an audible chirp signaled to LIGO — and the world — that they had found them. Analog Devices was proud to have had its converters, temperature sensors, op amps and more utilized by LIGO.

THE CHIRP HEARD 'ROUND THE UNIVERSE
