

FEEDBACK

YOUR SUGGESTIONS

THANK YOU!

It is nice to know that the magazine that I have been subscribing to for more than three decades is one of the best in India. I have greatly benefited from the articles published in your esteemed magazine. I wish the staff, publishers and editors all the best in making EFY one of the best internationally.

Prabhu D. Prakash

EFY. Thanks a lot for the pat on our backs—it is truly appreciated. We are trying to build a series of testimonials of readers who have benefited from EFY.

□ First of all, congratulations on *Electronics For You* and *electronicsforu.com* being recognised as the leaders in the Indian tech media, according to a recently-conducted ELCINA-IMRB study. I have been reading the magazine and visiting *Electronics For You* website since I was in college. I would like to say that, along with me, many people have gained a lot of knowledge from EFY, and have referred it to many people. Once again, congratulations to your whole team for providing circuit designs efficiently.

Sunil Rajpurohit

Through email

EFY. Thank you! We truly appreciate you taking out time to share this feedback with us.

□ Indeed, it is a great pleasure to write as a reply to your thanking letter. Whether ELCINA or others recognise it or not, my family knows how important EFY copies are for me. The study shows how deep EFY has

Electronics Projects

In 'Home Automation Using Android' DIY article published in August 2016 issue, I was unable to update the program into Arduino Uno board. Please help.

Asiq Syed Abdul Kader

EFY. First, compile *homeautomation.ino* sketch from Arduino IDE. Then, select the correct Arduino board and COM port from Tools menu. You should be able to upload the code without any problem.

In 'Home Automation Using Android' DIY article, can we power Arduino with a USB cable instead of a 12V DC?

Kartik

EFY. No! In this project, the relay board requires a 12V power supply. So an external 12V DC adaptor for Arduino board is used instead of powering through a USB cable. Therefore 12V is reflected at Vin pin of Arduino board, which is used to power the relay board.

In 'Infrared Sensor Based Power Saver' DIY article published in March 2016 issue, how can I know whether potmeter VR1 has 1-mega-ohm fixed value?

Liang

EFY. You need a multimeter to get the value of VR1.

In 'Low-Cost Air-Quality Meter' DIY article published in July 2016 issue, I have downloaded the code from *www.efymag.com* but it does not work. Please check and fix the problem.

Rob

EFY. You need DHTlib and RTCLib libraries under Libraries folder in Arduino IDE. The code folder has been updated now and is available at *www.efymag.com/admin/issuepdf/Air_Quality_Meter_code.zip*

penetrated into the roots of India. On many occasions, I have recommended the magazine to my students.

I am retired now from the main stream, but still scroll through the older editions of EFYs that I own. I wish EFY magazine goes deeper into the minds and hearts of the youth. Leadership of good people like you allows the magazine to grow to its peaks.

V. Hari Hara Prasad

Through email

EFY. Thank you for the pat on our backs! And, super thanks for spreading the word about EFY among your students!

EFY EDITORIAL CALENDAR

As we approach the beginning of 2017, I am sure you are all set to prepare many more interesting stories with versatile topics for your readers. Please share your editorial calendar for the next few months and, also, if possible, a list of upcoming stories where we could participate on behalf of our relevant clients.

Manita Bhatia Fernandes

Founder and CEO, Einovate

EFY. The editorial calendar for the year 2017 is available in one of the last pages of this magazine.

REMOTE CONTROL PROJECT

I am a subscriber to EFY. I need a remote control circuit that can control a fan or tubelight.

Namrata Madame

Through email

EFY. You may please refer to 'Remote Controlled Smartfan Using AT89C2051' DIY article published in December 2016 issue. It can also control light.
