

Bluetooth Smart used the most for device connectivity

The Bluetooth Smart and Smart Ready market is expected to be worth \$5.34 billion by 2023, growing annually at 2.23 per cent between 2017 and 2023—according to a report by MarketsandMarkets. Factors driving the growth of this market include rising demand for Bluetooth Smart and Smart Ready in consumer electronics such as smartphones and PC peripherals, growing Internet of Things (IoT) applications, and cost-efficient devices that consume less power.

Consumer electronics is the biggest market for Bluetooth technology with a multitude of Bluetooth Smart Ready devices. Different technologies, such as ZigBee, Wi-Fi, NFC, ANT+ and Bluetooth, are used by consumers to connect their devices such as smartphones, tablets and desktops. Among these technologies, Bluetooth LE, marketed as Bluetooth Smart, is the most widely used as it is simple and secure, and consumes less power.

On The Move

JSW Energy appoints Jain as CEO

JSW Energy has appointed Prashant Jain as its joint managing director and chief executive officer. A result-oriented professional with an experience of over twenty-five years and a strong passion for innovation, Jain will be responsible for developing and executing strategic and business planning activities and overseeing all aspects of the company's business.

India: electronics demand-supply gap to touch \$300 billion by 2020

The demand of electronic products in India is expected to grow annually at 41 per cent during 2017-20 to reach \$400 billion by 2020. The domestic production, which is currently growing annually at 27 per cent, may touch \$104 billion, leaving a huge gap for import to the extent of \$300

billion, according to a joint study brought out by ASSO-CHAM and NEC.

The investments in electronics manufacturing, which were just ₹ 110 billion in June 2014, increased exponentially to ₹ 1278.80 billion in 2016—due to the government's efforts to

create an enabling policy ecosystem through initiatives like Make in India and Digital India, and special focus to schemes like the Modified Special Incentive Package Scheme and Electronic Development Fund.

However, even though there are signs of promising growth, the local production of electronic products needs to be increased significantly to meet the domestic demand.

Video surveillance market to grow 13 per cent annually

India's video surveillance market will grow annually at nearly 13 per cent during 2017-23—forecasts Research and Markets. The Northern region registered the highest revenue in 2016 with states of Delhi NCR, Haryana, Punjab, Uttaranchal and Uttar Pradesh being the major contributors.

India's electronics security and surveillance market has grown considerably over the last few years due to rising security concerns and sustained growth of infrastructure in the country. The constant threat of terrorist attacks post Mumbai attack in 2008 as well as attack on the Indian Parliament has necessitated

the deployment of surveillance systems in both public- and private-sector buildings.

Although analogue based surveillance systems have accounted for majority of market revenues, growing awareness along with declining prices is likely to drive IP-based surveillance system sales over the coming years.
