

NETWORKING

Fig. 5: SDN architecture components

and access-control algorithms are centrally managed by the control plane.

OpenFlow protocol

OpenFlow is an application program interface (API) that provides interface between data and the control plane. It controls the forwarding table of the router from a remote location. OpenFlow based controllers maintain an inventory of all paths of the network and store these for further allocation. The controllers update the flow table as per network traffic, using OpenFlow protocol.

Northbound.

In general terms, northbound interface allows network components to communicate with higher-level components of the same network. Here, northbound is the API that interfaces control plane

BINAY - Lighting Up The Future

BINAY LED-based HIGH, MEDIUM AND LOW Intensity Aviation Obstruction Light Beacons

As per International Civil Aviation Organisation (ICAO) requirements Available in Low Intensity, Medium Intensity and High Intensity versions (as per International Civil Aviation Organization guidelines), BINAY's patented LED Aviation Lights come with 5-year/3-year warranties

LED Obstruction Lighting for:

- Industrial chimneys and smokestacks
- Transmission, microwave and cellular towers
- Radio, TV and similar structural towers
- High-rise buildings and structures
- Airports and airfields

The BINAY LED Aviation Obstruction Light offers the following advantages:

- Fit-and-forget maintenance-free operation
- A long life of 100,000 hours (20 years at 12 hours daily burning)
- Pays for itself within a short period of operation in the form of reduced installation, maintenance and servicing costs
- Quick installation; Reliable operation 365 days per year
- Shock-proof and vibration-resistant
- Over-Designed intensity to allow for natural LED intensity degradation over its operating lifetime

THE BINAY LED OBSTRUCTION LIGHT IS UNDER ACCEPTED PATENT, AND AS SUCH IS A PROPRIETARY PRODUCT

Binay Opto Electronics Pvt. Ltd.
