

### Telit unveils new IoT University

Telit, a global enabler of the Internet of Things (IoT), has launched Telit IoT University for IoT developers and integrators. Telit IoT University, part of the company's IoT Know How suite of consultative services, teaches customers and partners how to succeed in launching IoT solutions that deliver measurable business outcomes. Located at Telit IoT Platforms division in Boca Raton, Florida, Telit IoT University's curriculum includes courses and hands-on labs co-developed by Telit and Florida Atlantic University's Institute for Sensing and Embedded Network Systems Engineering (I-SENSE).

### Government initiatives, falling prices driving India's LED lighting market

Market intelligence firm 6Wresearch expects India's LED lighting market to grow annually at 26.6 per cent during 2017-23, owing to government initiatives such as UJALA, Housing for All and Deendayal Upadhyaya Gram Jyoti Yojna. Missions such as Smart Cities would also drive the LED lighting market in the coming years. At the same time, LED prices have declined tremendously in last few years, leading to surge in penetration across the country.

### Tata Power, Dell build India's largest vertical solar farm

Tata Power Solar, India's largest integrated solar company, and Dell International Services India, have together built India's largest vertical solar farm of 120kW capacity. The 45-metre-long structure built at Dell's Bengaluru campus provides dual benefits of producing sustainable green energy and insulation of the building by blocking the south sun, thus helping to reduce power consumption. The solar farm, envisaged by Dell, produces enough energy to light-up its entire cafeteria and basement parking.

### Hartek Group separates rooftop solar business

The Hartek Group, a power sector player, has set up Hartek Solar as a separate rooftop business vertical with industry veteran Ravinder Shan at its helm as chief executive officer (CEO). Having commissioned 13.75MW rooftop solar plants across the country, the Hartek Group rooftop solar business division has a two per cent market share. Shan revealed that the immediate focus of Hartek Solar would be on commercial spaces and industries.

### Anritsu LTE-Advanced RF conformance test system wins GCF certification

Anritsu's LTE-Advanced RF conformance test system ME7873LA has won the first GCF certification for the Cat-M1 RF conformance test as part of the Internet of Things (IoT) communications technology. Large domestic and international communications carriers are planning the 2017 introduction of Cat-M1 and NB-IoT technologies for use by mobile networks, supporting the growth of the so-called 'IoT Society.' With GCF certification, the ME7873LA has more than 70 test cases for frequency bands in Japan, N. America and Europe.

In December, it launched an AI fund to focus solely on "investing in AI companies focused on inclu-

sive growth and positive impact on society."

With the most AI patents among

its peers in 2015, IBM has invested billions of dollars in developing the Watson cognitive technology that analyses and interprets data including unstructured text, images and videos. In March this year, IBM and Salesforce announced that the two firms will be integrating their independent AI platforms.

Amazon has already created buzz with Alexa voice-enabled assistant that recognises and responds to voice requests instantly. Last year, it had launched a video that presented a utopian high-tech grocery store without cashiers.

### Solar park costs on the rise in India

Solar parks in India are aimed at reducing the hurdles and providing a level-playing field to developers, whether domestic or foreign. While these parks have spurred record low tariffs in the recent times, market intelligence firm Mercom has found that solar park costs are actually increasing. Incomplete solar park infrastructure, exorbitant upfront fees and not-so-transparent yearly charges are all adding to project costs, with some developers calling for auctions outside of solar parks as they think it could be cheaper in some instances.

Even though all solar parks come under the same policy, each solar park has a different fee structure, which is leading to variation in tariffs and project costs. In fact, two solar parks in the same state can have different fees. According to Mercom's data, the solar park fee in India varies from ₹ 3.73 million per megawatt in Karnataka to ₹ 10.58 million per megawatt in Gujarat.

Land application fees (non-refundable one-time), upfront development charges (one-time), annual leases of land, and annual operation and maintenance charges are the most common park fees or charges. However, developers are faced with differing stamp duties in each state and service taxes on all components. Hidden charges end up inflating project costs.
