Intelligent power module

Infineon has developed a highly-integrated intelligent power module to control induction motors and permanent magnet synchronous motors with single-phase power factor correction (PFC) in variable-speed drives. The new module, CIPOS Mini, combines the PFC stage with a 3-phase inverter in one package. This helps to reduce system size and the bill of material. The additional PCB space gives room for further components.

The power module is available in inverter current ratings of 4A, 6A, 10A and 15A.

DC-DC converters

The DCM VIA family from Vicor Corporation are ruggedised modular DC-DC converters in a thermally adept, low-profile (9.3mm) VIA package. These offer enhanced functionality and performance, including EMI filtering, transient protection, inrush current limiting, as well as a secondary-referenced control interface for trim, enable and remote-sensing.

Two new MIL-COTS (M-Grade) versions are available, with 270V nominal input voltage (160-420V input voltage range) and nominal output voltages of 24V and 28V with up to 500 watts of output power.

Power analogue buck controller

A new Digitally Enhanced Power Analog (DEPA) buck controller for DC-DC power conversion is now available

from Microchip Technology Inc. The single-chip MCP19122/3 accepts a high-voltage input (up to 42V) while simultaneously regulating a wide output voltage range (0.3V to 16V) without external components or drivers.

The internal PIC microcontroller in the MCP19122/3 can dynamically adjust the operating frequency, over- and under-voltage lockout thresholds, current limits, soft-start, voltage or current output set points and maximum duty cycle.

LIGHTING

Smart LED light

Opplé has unveiled the LED T5 plastic batten. This smart and cost-effective light is Opplé's latest addition to its range of professional and home luminaries.

LED T5 comes in a plastic unibody design with an inbuilt integrated connector, so it can be installed anywhere and at any place. Variable length makes it convenient for smaller spaces as well.

Priced at ₹ 395 onwards, this product is available in power capacities ranging from 5W to 20W.

Security search light

BINAY has developed a long-range, solidstate security search light. This product has a narrow beam for enhanced long-range visibility (of one km approx.) According to the company, it is not a standard 500W product, but has specialised optics for a very narrow beam. Consuming 500W max., the light features colour temperature of 5000-6500K, colour rendering index of 75-80, intensity greater than 1,000,000cd with power factor of 0.95 and total har-

monic distortion less than 20 per cent.

MISCELLANEOUS

UPS

Vertiv, formerly known as Emerson Network Power, has introduced Liebert eXM uninterruptible power supply (UPS) for IT spaces and light industrial applications with medium power requirements.

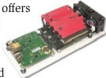

The three-phase Liebert UPS is available in fixed capacities of 80kVA/kW, 100kVA/kW, 120kVA/kW, 160kVA/kW and 200kVA/kW, with an optional built-in isolation transformer.

It delivers high efficiency levels for mid-size data centres, with operating efficiencies as high as 97 per cent in double-conversion mode and 99 per cent in energy-saving Eco mode.

New system-on-modules and microserver evaluation platform

Toradex has partnered with Christmann Informationstechnik + Medien GmbH, Germany, which now offers RECS|Box Atlas Quad Apalis evaluation platform, and RECS|Box Antares and

Arneb 1RU server enclosures that can run 24 and 72 Apalis systems-on-modules (SoMs), respectively, in a cluster configuration. Apalis ARM-based SoMs are available in different configurations such as NVIDIA TK1 SoC using a 2.1GHz quad-core Cortex-A15 and a GPU with 192 CUDA cores.

The Atlas kit supports four Apalis SoMs in an evaluation setting on the user's desk. The same baseboard can also be used in bigger installations with even more modules.
