

TODAY'S SMART DEVICES DEMAND

SMARTER

SEMICONDUCTOR TEST SYSTEMS

Unlike closed, proprietary ATE, NI's Semiconductor Test System (STS) meets the test needs of today and scales for tomorrow by providing engineers an open, software-centric platform based on PXI instrumentation, TestStand test management software, and LabVIEW code module development. With lab-grade measurement quality and production-grade performance, the STS accelerates RF and mixed-signal tests from the characterization bench to the production floor, lowering test time and cost. That's progress. That's a smarter test system.
