Python can be directly run through Command Prompt on Windows. But this needs addition of Python directories to the path under System Variables as explained below. If you run `python.exe` command immediately after installation without adding the path, you may encounter the error

Follow the steps below to add Python to Environment Variables path:

Click on Environment Variables and search for the Path variable. Select Path variable and click on Edit (Fig. 8).

C:\Python27

C:\Python27

5. Open Command Prompt and type `python` (Fig. 10). This screen confirms proper installation of Python.

Now, you can directly run
n commands from Command
pt.

Python IDE comes with Python installation and is used to write, test and debug Python programs.

You can run it directly from the installed applications by clicking on its logo. Or, you can write IDLE in the search tab on Windows start button, click on IDLE (Python GUI) option. You will get Python shell screen as shown in Fig. 11.
