ST's Unique portfolio for IoT applications

ST's ultra-low-power solution is the right choice for applications operating on battery or supplied by energy harvesting, requiring an extra-long life. ST's ultra-low-power MCU platform is based on a proprietary ultra-low-leakage technology and optimized design. ST offers the simplest, fastest and most robust way to develop applications for the Internet of Things (IoT) with our unique portfolio covering all the necessary building blocks. With these building block, developers can easily find solutions to create Smart Things for a number of IoT application domains.

- 32-bit ARM Cortex-M4 + FPU at 80 MHz
- From 128 Kbytes to 1Mbytes of Flash
 - Lowest power mode
 - RAM + RTC: 0.45 μ A

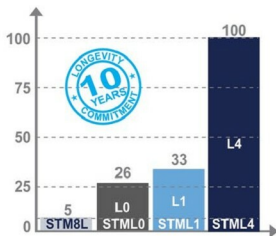

- 32-bit ARM Cortex-M3 at 32 MHz
- From 32 to 512 Kbytes of Flash
 - Lowest power mode +
 - RAM + RTC: 1.2 μ A

- 32-bit ARM Cortex-M0+ at 32 MHz
- From 8 to 192 Kbytes of Flash
- Lowest power mode + RAM + RTC: 0.67 μ A

- 8-bit STM8 Core at 16 MHz
- From 2 to 64 Kbytes of Flash
- Lowest Half mode: 0.3 μ A

Development as easy as 1 2 3

A full set of evaluation boards enables flexible prototyping as well as full STM32L4 evaluation.

- Commercial part numbers:
- NUCLEO-L432KC (32 pins)
 - NUCLEO-476RG (64 pins)
 - STM32L476G-DISCO
 - STM32L476G-EVAL

SOFTWARE

STM32CubeMX enables fast development thanks to its MCU clock configurator, power consumption calculator and code generation tools.

STMicroelectronics Pvt Ltd

Plot No 1, Knowledge Park III,
Greater Noida 201308, Uttar Pradesh, India
