

COMPONENTS

Accelerometer

Kionix, a ROHM Group company, announces the release of KXTJ3, a new 3-axis accelerometer offering unprecedented value while providing the performance of a much more expensive accelerometer in a tiny, 2mm × 2mm × 0.9mm form factor.

KXTJ3 offers g-ranges of 2g, 4g, 8g or 16g, and resolution modes up to 14g. It supports I2C protocol up to 3.4MHz and has a built-in voltage regulator offering stable operation from 1.71 to 3.6V.

Spring contact probes

The latest probes from M.S.B. Electronics have applications in PCB testing, in-circuit testing, fixtures making, mobile phones, connectors, telecommunication equipment, medical equipment, automobiles and others.

Microcontrollers

The latest STM32L496 and STM32L4A6 microcontrollers from STMicroelectronics extend the unique fusion of ARM Cortex-M4F core performance and proprietary ultra-low-power technologies, adding larger memories, enhanced graphics support, extra peripherals and increased power-saving flexibility.

Bigger on-chip RAM, up to 320kbytes, complements the newly-added ST Chrom-ART Accelerator graphics engine for smoother display performance in energy-conscious

applications such as IoT devices and smart watches. There is also up to 1Mbyte flash, an extra CAN interface, a camera interface and crystal-less full-speed USB OTG. A new high-pin-count UFPGA169 package option gives extra flexibility to exercise these new peripherals, which join the rich digital and smart analogue features shared with STM32L476/486.

LED chip

Kwality Photonics has launched high-performance, medium-power KLSL5630W 150mA LEDs in 65/70 lumens output that deliver exceptional brightness, thanks to the specially-designed lead frame profile and improved heat dissipation of the device. Kwality's high-power KLHP3535, medium-power KLSL5630 and 2835, and low-power 3014 and 3528 LEDs enable you to bid for all EESL, government tenders and BIS based LED indents.

MISCELLANEOUS

Inverter solution

Renesas Electronics has announced its new 100kW-class inverter solution that achieves industry-leading small design class of 3.9 litres for high-power 100kW class motors in mid- to large-sized hybrid electric vehicles (HEVs), including SUVs and mid- to small-sized electric vehicles (EVs).

Renesas will provide the new solution as a kit that includes software to maximise the HEV/EV motor performance and of hardware components such as microcontrollers, insulated gate bipolar transistors and fast-recov-

ery diodes, and other power semiconductor devices.

Charge controller

Stellar Innovations has launched high-voltage MPPT based charge controllers for 96V to 240V battery banks with 50A charging current. Salient features are:

- Maximum PV input Voc (open circuit voltage) of 750V DC. Connects up to 15 solar panels of 24V in series per string to minimise power losses.
- PCU type functionality: Maximum battery charging current can be restricted and any excess solar power goes directly to the inverter to run load.
- Selectable battery bank voltage from 96V up to 240V; 50A maximum charging current.
- IGBT based MPPT product produces up to 30 per cent more power.
- Four-line LCD display to show battery, PV panel and DC load status.
- Remote monitoring facility on computer through RS232 port.

OTA prototype for Verizon 5G

NI has given the world's first public demonstration at 28GHz of a real-time, over-the-air (OTA) prototype aligned with Verizon 5G specification at IEEE Wireless Communications and Networking Conference in San Francisco. The system uses OFDM with eight component carriers in a 2 × 2 downlink MU-MIMO configuration with hybrid beam-forming and a self-contained sub-frame, yielding a 5Gbit/s peak throughput, and is scalable to over 20Gbit/s with eight MIMO streams.
