Now click pictures, take videos, play games and music—pack all your entertainment with 32GB expandable memory. The tablet features dual-core A7 CPU, 512MB RAM, 4GB ROM, capacitive 5-point touch-screen, Wi-Fi connectivity and more.

Sennheiser releases headphones

A heavyweight in sound, as light as a breeze on your ears

Ultra lightweight and compact, HD 2.1.0 can be folded together when not in use. Sennheiser dynamic drivers deliver thoroughly satisfying sound reproduction with powerful bass response. With its closed-back on-ear design, HD 2.1.0 offers ample isolation from ambient noise, mustering a powerful bass without compromising the territories of mids and highs. It delivers a vibrant, rock-solid sound that you can enjoy for hours on end, thanks to the excellent comfort of the premium leatherette earpads.

Smartphone from Sony

Super-slow motion, super wow expression

The new Xperia XZs has a smartphone camera that can capture all moments. The Motion Eye camera has a memory stacked sensor and records 960 frames per second, for super-slow-motion video that reveals what you would otherwise miss. Using Predictive Capture technology, it senses movement in front of you and starts to buffer images while you are preparing to shoot. So if you clicked too late, just go back in time and choose from up to four photos taken before you pressed the camera button.

It also features SteadyShot with intelligent active mode that reduces shake, with image stabilisation that compensates for movement in five directions. This means that video footage looks smoother, even if you record while you are moving or when close to your subject. The phone has durable IP65/68 rated construction, which means rain and dust will not damage it.

Focus Timer Reborn, a productivity app

Focus Timer Reborn works by helping you time the parts of your work day where you are productive. You can set the work timer for as long as you want. When it goes off, set the break timer so you do not dilly dally. The idea is to help you stay on track and be as productive as possible without burning yourself out. It also keeps a log so you can track how you have been doing.

A chat based language learning app

Bilingua-Language Exchange is a chat based language learning app where you can learn new languages not by interacting with some AI but with real people who know that language. It connects you by asking which language you are most proficient in and the language you want to learn. You can select your areas of interest, and the app will connect you with like-minded users. You can check your skills using in-app games and quizzes. The app also supports conversations in Indian languages such as Hindi, Malayalam, Marathi, Bengali, Telugu and Tamil.

Apple introduces a new way to create expressive videos

Apple has introduced Clips, a new app that makes it quick and fun for you to create expressive videos on iPhone and iPad. The app features a unique design for combining video clips, photos and music into great-looking videos to share with friends through Messages app, or on Instagram, Facebook and other popular social networks.

An expense management app, IQBoxy

As the name suggests, this app helps you track expenses. It features OCR support to help you digitise your receipts for future reference. It has a simple material design interface. The app boasts no humans behind the curtain, so there is no one reading your receipts when you scan these. It does not replace large expense-tracking suites, but it is a great tool to augment these.
