

Precise heart rate measurements

OSRAM adds new generation of sensors to BioFy family

OSRAM Opto Semiconductors presents two new sensors for monitoring fitness levels. Their main benefit is the excellent signal quality for heart rate measurements, which allows the derivation of secondary measurement parameters such as blood pressure. The SFH 7072 has also been further optimized for determining the oxygen saturation of blood (SpO₂). Samples for the SFH 7070 are expected end of November – for the SFH 7072 end of this year.
