

FEEDBACK

YOUR SUGGESTIONS

ELECTRONICS INDUSTRY DIRECTORY

I acknowledge with thanks the receipt of Electronics Industry Directory 2016-17. It is getting better every year. Keep up the good work!

Sarabjit Singh

General Manager - Materials
NTL Electronics India Ltd, Noida (UP)

EFY. Thanks for the pat on our back! Look forward to your feedback on how we can make it even more useful for the industry.

THERMOSTAT FOR FRIDGE

Congratulations! 'Electronic Thermostat For Fridge' DIY article published in May 2016 issue is a good project and well explained. How about adding defrost, on-delay and over/under voltage protection? All that could be added easily, and is essential for a practically-viable circuit.

Vishwa

Through email

The author Sundar B. replies:

Thank you, Mr Vishwa, for deeply probing the circuit and finding the additional possibility! A defrost detector can be interfaced with the relevant sensor. I am not clear about what you mean by on-delay. Please elaborate on that so that I can work on it.

Regarding over/under voltage protection, indeed, it can be built, and I will be publishing that as a separate article with more system integration such as remote monitoring of the refrigeration.

I am also building a wireless monitoring system with multiple features using a 16-bit microcontroller. Once I am done with the system integration and field testing/commissioning, barring proprietary data and systems, I will be scaling down the same for an 8-bit microcontroller with ZigBee interface.

Electronics Projects

Thanks Fayaz Hassan for your article '12V Battery Charger-Cum-Variable Power Supply' published in November 2016 issue! It is great work that you have brought through this article.

Vinay Patole

EFY. Thanks for the feedback! We have forwarded your message to the author Fayaz Hassan.

Please wait until then.

I am very glad about your inputs. These are a true source of encouragement.

TWO-WATT AF AMPLIFIER

I am interested in 'Two-Watt TBA820M AF Amplifier' DIY project published in September 2016 issue. But TBA820M and potentiometer are not available in my local market. Please suggest an alternative option or the source from where I can buy these.

Rigil Gracious

Through email

EFY. You may buy TBA810M from element14.com. For the potentiometer, you need not use the exact value. You can replace it with a 22k, 47k or 100k potentiometer for testing.

IMAGE PROCESSING

In 'Basic Image Processing Using MATLAB' DIY article published in July 2016 issue, how can we test for different images?

Shivani

Through email

The author Ismail Taibani replies:

For testing images other than the example given in the article, simply copy and paste the path of the image to imread

syntax in the source code. For example, to test `paris.jpg` image, your code will be:

```
originalimg = imread('C:\Users\anas\Download\paris.jpg');
```

Exact path of the image can be found at Properties\General\Location by right-clicking on the image.

IoT PROJECTS

Please give a list of IoT based projects published in EFY.

Kanchan Kumari

Through email

EFY. You may refer to the following IoT based projects published in EFY:

- IoT Smart Alert Notification Using Android App, March, 2017
- IoT Based Smartcamera Using Android App And Raspberry Pi, November, 2016
- IoT Wi-Fi Temperature-Logging System, March, 2016
- Introduction To Smart Wi-Fi, March 2016

You can buy *Electronics For You* magazine from various online stores including magzter.com, lulu.com, amazon.com and scoop.com

FM RADIO

In 'Short-Range FM Radio Station' DIY project published in April issue, pin numbers of the FM module for positive supply and ground are different in the article and the circuit diagram. Please check.

Nayaz Ahmed

Chennai

EFY. Thanks for the feedback! If you refer to the actual FM transmitter module shown in Fig. 1 in the article, you will notice that there is no pin number as such. Numbers in the text are serial numbers with no particular order, and pin numbers shown in the circuit are indicative.
