Worldwide semiconductor revenue forecast to increase 12.3 per cent in 2017

According to Gartner Inc., worldwide semiconductor revenue is forecast to total US\$ 386 billion in 2017, an increase of 12.3 per cent from 2016. Favourable market conditions that gained momentum in the second half of 2016, particularly for commodity memory, have accelerated and raised the outlook for the market in 2017 and 2018. However, the memory market is fickle, and additional capacity in both DRAM and NAND flash is expected to result in a correction in 2019.

PC DRAM pricing has doubled since the middle of 2016. A 4GB module that cost US\$ 12.50 has jumped to just under US\$ 25 today. NAND flash ASPs increased sequentially in the second half of 2016 and the first quarter of 2017. Pricing for both DRAM and NAND is expected to peak in the second quarter of 2017, but relief is not expected until later in the year, as content increases in key applications such as smartphones have vendors scrambling for supply.

Unit production estimates for premium smartphones, graphics cards, video game consoles and automotive applications have improved and contributed to the stronger outlook in 2017. In addition, electronic equipment with heavy exposure to DRAM and NAND flash saw semiconductor revenue estimates increase. This includes PCs, ultramobiles, servers and solid-state drives.
