

in audio applications such as Bluetooth speakers, USB DACs and mini/micro component systems.

The SoC carries out control and management of peripheral components and input/output interfaces, as well as enables playback of a wide range of audio sources.

The BM94803AEKU integrates a processor chip with SDRAM, leveraging software and circuit elements such as ASIC, MCU and various media decoders on a single chip. The media decoder supports a wide range of audio sources, and ensures stable playback of damaged CDs and even non-standard USB.

Ultrasonic sensing microcontrollers

Texas Instruments has unveiled a new family of microcontrollers (MCUs) with an integrated ultrasonic sensing analogue front-end that enables smart water meters to deliver higher accuracy and lower power consumption. The

MSP430FR6047 MCU family lets developers add more intelligence to flow meters by taking advantage of a complete waveform capture feature and analogue-to-digital converter (ADC) based signal processing. This enables measurements with precision of 25 picoseconds or better. In addition, the integrated MSP-430FR6047 devices reduce water meter system component count by 50 per cent and power consumption by 25 per cent.

Mini fuses

Conquer Electronic has introduced MMT series fuses that meets the requirements of small size and higher

voltage (400V AC/250V DC) performance for wider design. Finding applications in devices ranging from LED drivers to notebooks and medical systems, the new series benefits the mechanical design of the application.

POWER SUPPLY

Portable power banks

Digitek has launched two premium power banks, DIP12000 PLB (12,000mAh capacity) and DIP10000 PLD (10,000mAh capacity). Combining

performance and style, these high-capacity power banks are designed to ensure that your devices never run out of charge.

Sporting a sleek, compact exterior, the two devices work for at least 500 cycles. When not in use, these remain charged for a month after a full charge. The power banks are equipped with Li-polymer batteries that can be charged fully in 5-6 hours.

Modular UPS

Consul Neowatt has launched a three-phase modular online UPS, Falcon 7000M. Available in a range scalable up to 900kVA, the UPS is suited for data centre, IT/ITES, e-commerce, BFSI, retail, education and entertainment segments. Clients can add UPS modules to provide the required redundancy and capacity as their power needs evolve and change with time.

Falcon 7000M is available in two flexible configurations of 25 and 30kVA

modules for vertical scalability with a maximum of six and ten modules in a frame, respectively.

TOOLS & EQUIPMENT

Easy-to-integrate camera module

Toradex' new 5MP MIPI-CSI camera module is an add-on board for the Apalis

family of system-on-modules compatible with the Ixora carrier board. It uses an OmniVision OV5640 camera sensor with built-in autofocus. The OV5640 is a low-voltage, high-performance, 5-megapixel (2592x1944) CMOS image sensor.

The module supports video capture at up to 120 frames per second (FPS) in 320x240, 30 FPS in 1080p, or 15 FPS in the full 5-megapixel resolution. It doesn't require any external power supply.

R-Car reference package for Android

Renesas Electronics Corporation has announced the R-Car reference package for Android for its R-Car automotive system-on-chips (SoCs). This package supports Android 8.0, the latest OS announced by Google, which includes support for functions required in automotive systems. The combination of this OS with Renesas' robust and highly secure automotive SoC simplifies development of automotive Android platforms. The R-Car reference package for Android comprises the R-Car reference board and an extension board as hardware environment, and the board support package (BSP) as software support.
