

Fig. 10: Wave window

4. Monitor the LFSR for simulation purpose. The test bench is used to verify the LFSR for 4-bit mode. Now you are ready to simulate your design by clicking 'Run' from 'Simulate' menu bar as shown in Fig. 9. You can view the output on 'Wave' window as shown in Fig. 10.

Feedback around an LFSR's shift register comes from a selection of points (taps) in the register chain and constitutes XORing these taps to provide tap(s) back into the register. Register bits that do not need an input tap operate as a standard shift register. It

EFY Note

The source code of this project is included in this month's EFY DVD and is also available for free download at source.efymag.com

is this feedback that causes the register to loop through repetitive sequences of a pseudo-random value. The choice of taps determines the number of values in a given sequence before the sequence repeats. The implemented LFSR uses a one-to-many structure, rather than a many-to-one structure, as this structure always has the shortest clock-to-clock delay path. **EFY**

High Performance & Reliable
Wireless Solutions
Partner For Your Business

★★★★★

GSM Modem : SIM800C

- Voltage input: 5V
- Powered using Micro USB port
- Serial RS232 Interface
- Antenna connector with SMA and UFL option
- Dimension : 50mm x 75 mm

LTE Modem : SIM7600

Quad-Band TDD-LTE B38/B39/B40/B41

- Tri-Band FDD-LTE B1/B3/B8
- Dual-Band TD-SCDMA B34/B39
- Dual-Band WCDMA/HSDPA/HSSPA+ B1/B8
- GSM/GPRS/EDGE 900/1800 MHz
- Control Via AT Commands
- Supply voltage range: 5V (USB)
- Operation temperature: -40°C to +85°C
- Dimension: 65x38 mm
- GNSS gps One Gen 8B: standalone/assisted/XTRA

★★★★★

Starting from Rs. 1100/- onwards **AN Wireless Solutions**
