

Accelerate your IoT Development using DesignLab2®

DesignLab2® a new compact comprehensive solution for IoT application builders. It is space saving, allows faster testing time, faster troubleshooting, display multiple large and simultaneous windows, allows storage of waveforms and sharing waveform data. It also has virtual component library for real-world hardware interface, multi-channel data acquisition, event scheduler to automate testing time, sensor interfacing with cloud storage and various other TMI capabilities.

Upload Data to Cloud

Power, Source, Acquire, Test & Measure Signals

Actuator

Multi Utility Capabilities

- » Digital Oscilloscope
- » Mixed Signal Oscilloscope
- » Synthesized Function Generator
- » Logic Analyzer
- » Pattern/Word Generator
- » Programmable Clock Generator
- » Spectrum Analyzer (FFT Analysis)
- » Variable Power Supply
- » Fixed Power Supply
- » Volt & Current Meter (DC)
- » Frequency Counter
- » Event Scheduler
- » Virtual Component Library for real time hardware interface
