

Just because
it connects and communicates,
doesn't mean it is secure.

**Would you be able to
tick this critical checklist confidently?**

Are you sure ...

- ☐ That security is built into networks and devices both from the outset?
- ☐ That only necessary data is collected, retained securely and disposed off when no longer required?
- ☐ That training and guidance are provided to promote good security and privacy practices to staff and customers?
- ☐ That security issues are addressed at the appropriate level of responsibility in your organization?
- ☐ That you have retained the services of security specialists for providing oversight?
- ☐ That you have defense-in-depth approach when significant risks have been identified?
- ☐ That you have implemented controls to limit the ability of unauthorized person to access consumer's device, data, or network?
- ☐ That you are monitoring products, devices and data throughout the IoT ecosystem?

Nebulae.io
